The map displays the Fruitland Coal field with well density contours and application lands. The field is divided into townships (T 32 N, T 33 N, T 34 N, T 35 N) and ranges (R 6 W, R 7 W, R 8 W, R 9 W). The density contours are color-coded: RED (1 well per 320 acres), BLUE (1 well per 160 acres), and YELLOW (1 well per 80 acres). Application lands are shown in GREEN (1 well per 160 acre). The map shows a high density of wells in the northern part of the field, particularly in the R 8 W and R 7 W ranges, and a lower density in the southern part. The application lands are primarily located in the southern part of the field, specifically in the R 8 W and R 7 W ranges.

The map displays the Fruitland Coal field with well density contours and application lands. The field is divided into townships (T 32 N, T 33 N, T 34 N, T 35 N) and ranges (R 6 W, R 7 W, R 8 W, R 9 W). Well density is indicated by color: RED (1 well per 320 acres), BLUE (1 well per 160 acres), and YELLOW (1 well per 80 acres). Application lands are shown in GREEN (1 well per 160 acre). The map shows a high density of wells in the northern part of the field, particularly in the R 8 W and R 7 W ranges, and a lower density in the southern part. The well density contours are shown as thick black lines. The application lands are shown as green shaded areas. The map is overlaid with a grid of 30-second intervals.

April 19, 2007

The map displays a grid of land sections with color-coded well density and application lands. The grid is bounded by Townships T 32 N, T 33 N, T 34 N, and T 35 N, and Ranges R 6 W, R 7 W, R 8 W, and R 9 W. The well density is indicated by color: RED (1 well per 320 acres), BLUE (1 well per 160 acres), and YELLOW (1 well per 80 acres). Application lands are shown in GREEN (1 well per 160 acre). The map shows a high concentration of wells in the northern and eastern portions of the field, with a significant area of application lands in the southern and western portions.
