Re: West Divide Seep Area Fourth Quarter Monitoring Status Report for December 2008

Dear Mr. Middleton:

Cordilleran Compliance Services, Inc. (Cordilleran), a division of Olsson Associates, has completed quarterly groundwater and surface-water monitoring for EnCana Oil & Gas (USA) Inc. (EnCana) at the West Divide Creek Gas Seep (Figure 1) for the fourth quarter of 2008.

This report summarizes the status of the remediation system and the results of surface-water and groundwater monitoring in December 2008 and data collected since 2004 to monitor the impacts of the dissolved phase volatile hydrocarbons comprised primarily of methane and benzene at the seep site.

Groundwater and Surface-Water Monitoring

Cordilleran collected groundwater samples from 22 monitoring wells during the last quarter of 2008 (Figure 1). Two duplicate samples were also collected from the monitoring wells. Prior to sample collection, static water levels were measured in monitoring wells to within 0.01 feet (ft) from the top of the PVC casing using an electronic water level indicator then a total of three casing volumes were removed prior to sampling each well using dedicated disposable bailers with bottom loading valve assemblies. Field parameters were obtained at the completion of purging activities and included temperature, specific conductance, dissolved oxygen, pH, total dissolved solids and turbidity. Groundwater samples were collected following field parameter measurements.

Cordilleran collected eight surface-water samples (DCS-1-8), extending from the former seep area to the northern Langegger property line. Field parameters (temperature, specific conductance, dissolved oxygen, pH, total dissolved solids, and turbidity) were also collected from the West Divide Creek locations (Figure 1). One duplicate sample was acquired from a sampling point in the creek.

Water-quality samples collected during this period were analyzed by Evergreen Analytical Laboratory (EAL) of Wheat Ridge, CO for the following analyses:

- BTEX/MTBE using EPA method 8021
- Dissolved methane using method RSK 175M
- Chloride (Cl) using method 300E
- Sodium (Na) using method SW6020

- pH using EPA method 150.1
- Total dissolved solids (TDS) using method SM240C
- Specific conductivity using method SM251B.

Isotopic methane was determined by Isotech Laboratories, Inc of Champaign, IL. Stable isotopes of carbon and hydrogen in methane and stable isotopes of carbon in ethane and propane and gas composition were determined where dissolved gas concentrations were sufficient.

Groundwater and surface-water samples were placed in the appropriate sample containers provided by EAL, labeled, stored on ice, and delivered under chain-of-custody procedures to EAL.

Site Hydrogeology and Hydrology

For this monitoring period, groundwater was encountered from near surface (in the seep area) to 23.9 (MW-21) feet below ground surface (ft-bgs). The groundwater flow direction continues to be from the seep area towards the north, mimicking the creek flow direction (Figure 2). The groundwater gradient for this period of monitoring was 0.017 feet/foot (ft/ft), which is consistent with gradients measured during other monitoring periods.

The flow in the creek during December was low, as is typical for the winter monitoring period. There were no unusual bubbles observed in the creek and in the area near the seep during this monitoring period.

Groundwater Monitoring Results

A summary of laboratory analytical groundwater results for December 2008 is presented in Table 1. The extent of benzene concentrations for this monitoring period is shown in Figure 3. The distribution of total dissolved methane concentrations are shown in Figure 4. The December 2008 results along with results for this year are depicted in Figure 5. The December 2008 field parameters are contained in Appendix A. A summary of historical hydrocarbon analyses results for groundwater data collected since 2004 are contained in Appendix B. Appendix C contains a summary of historical hydrocarbon analyses results for surface-water data collected since 2004. The Eicher-Bracken data is summarized in Appendix D. The QA/QC data are contained in Appendix E. The thermogenic methane data are summarized in Appendix F. The laboratory reports for December 2008 are in Appendix G. Graphs of chemical concentrations are in Appendix H.

For December 2008, detections of benzene continue to be found in monitoring wells 2, 4, 9 and 17 (Table 1). Benzene concentrations were detected above the state standard of $5 \mu\text{g/l}$ in monitoring wells MW-2 at $140 \mu\text{g/l}$, MW-4 at $100 \mu\text{g/l}$, and MW-17 at $21 \mu\text{g/l}$ (Table 1). The reported benzene concentration at MW-9 was $1.1 \mu\text{g/l}$. Toluene was not detected in any monitoring wells during this monitoring period (Table 1). Ethylbenzene was only detected during December in monitoring well MW-2 at a concentration of $4.0 \mu\text{g/l}$ (Table 1). Total xylenes were detected in MW-2 and MW-4 (Table 1). The data continues to show decreasing concentrations of hydrocarbons at all locations (Appendices B and H).

The laboratory results for methane are reported as total dissolved methane. This includes both biogenic (methane gas generated by biologic reduction of organic matter) and thermogenic

methane (methane gas generated by thermal reduction of deeply buried organic matter). Total dissolved methane above the LDL is generally detected in all monitoring wells in the study area. As previously observed in the seep area, the highest concentrations of total dissolved methane in the groundwater are located in close proximity to the seep at well MW-4 (Table 1 and Figure 4).

The primary qualitative methods of differentiating between thermogenic and biogenic methane are based on isotopic data, methane / non-methane hydrocarbon ratios, and literature values for the evaluations. The data are first evaluated on the basis of the laboratory-determined values of $\delta^{13}\text{C}_1$ (methane carbon-13 isotope ratio), δDC_1 (methane hydrogen isotope ratio). These values are compared with Figure 9 in Appendix F (from Kaplan, et. al., 1997) which empirically delineates the different isotopic values of methane from biogenic and thermogenic sources. The data are then evaluated on the basis of the $\text{C}_1 / (\text{C}_2 + \text{C}_3)$ ratio (methane to ethane and propane). Hydrocarbon gas from 'biogenic-only' sources contains a high proportion of methane (>99%) and $\text{C}_1 / (\text{C}_2 + \text{C}_3)$ values greater than 10,000 would be consistent with methane from biogenic sources. If these evaluations produce ambiguous results then the sample may be a mixed source sample and a gross quantitative approximation of the thermogenic / biogenic split is arrived at by comparing the gas component profile with a known sample of 'reservoir-typical' thermogenic gas. The methane fraction of a 'reservoir-typical' thermogenic source (79%) is used as a baseline and the biogenic source is assumed to be 100% methane. An algebraic mixing calculation is used to estimate what percentage of the total methane comes from biogenic versus thermogenic sources.

Isotopic samples were collected from monitoring wells 2, 4, 6, 12, 14, 16, 17, 23 and 27 and creek locations DCS-2 and DCS-3 during this monitoring period. The results for these locations are shown in Appendix F. All of these estimated concentrations are less than the initial concentrations, but have remained stable at these concentrations since 2005.

Surface-Water Monitoring Results

A summary of historical surface-water results for hydrocarbons is contained in Appendix C. Laboratory results indicate that BTEX compounds were not detected in any of the Divide Creek surface-water samples in December (Table 2). Total dissolved methane was detected in all samples, but all with reported concentrations less than 0.002 mg/l (Table 2). The results from December 2008 date indicate that significant hydrocarbon concentrations above background have not been detected in the creek since 2007 (Appendix C).

Divide Creek Seep Remediation Status

The air sparge remediation system has operated continuously throughout this quarter with minimal down time. Since the start up of the system in April of 2004, the number of monitoring wells in the study area with benzene concentrations above the maximum contaminant level (MCL) has been reduced from 14 to 3 with all of the wells above the MCL located in the seep area and upgradient of the remediation system wells. The system is positioned to provide a barrier to prevent the downgradient migration of the chemicals of concern.

Monitoring has continuously shown that the air sparge remediation system has successfully contained migration of the hydrocarbon plume even with the reduction in treatment time from 24 hr/day to 12 hr/day. Since the reduction in treatment time in May 2008, the data suggest that this reduction in treatment time has not changed groundwater quality in the vicinity of the remediation system (Appendix B). The treatment time may be reduced further if the data

continues to show treatment at 12 hr/day is sufficient. Cordilleran will continue to evaluate remedial options in the area upgradient of the present air sparge array.

Cordilleran will continue to monitor all monitoring wells and surface-water locations on a quarterly basis and provide operation and maintenance to the system on an as needed basis. A duplicate sample for thermogenic analysis will be acquired from one of the monitoring wells.

Cordilleran appreciates the opportunity to provide services to EnCana Oil & Gas (USA) Inc. If you have any questions or concerns regarding this information, please contact our offices.

Sincerely,

Custody seals were present and intact.

The temperature of the sample(s) upon arrival was 1.2°C.

Sample(s) were received in good condition, in the proper container, and within holding times.

Metals samples were preserved properly. VOC samples were not preserved.

VOC sample(s) were received with no headspace present. JD

Dear Stuart Hall:

Enclosed are the analytical results for the samples shown in the Laboratory Work Order Summary. The invoice is included with this report or has been mailed to another party as indicated on the chain of custody.

The enclosed data for testing performed at Evergreen Analytical Laboratory (EAL) have been reviewed for quality assurance. A case narrative is included to describe any anomalies associated with the samples or data.

EAL will dispose of all samples 44 days from the sample receipt date. If you want samples returned, please advise us by mail or fax as soon as possible.

A copy of this project report and supporting data will be retained for a period of five years unless we are otherwise advised by you. A document retrieval charge will apply.

Thank you for using the services of Evergreen Analytical. If you have any questions concerning the analytical data, please contact me. Please direct other questions to Client Services.

Sincerely,

A handwritten signature in black ink, appearing to read "Carl Smits".

Custody seals were present and intact.

The temperature of the sample(s) upon arrival was 2.0°C.

Sample(s) were received in good condition, in the proper container, and within holding times.

VOC samples were not preserved.

VOC sample(s) were received with no headspace present. JD

QUALITY ASSURANCE (QA)

Analyses performed on samples in this work order by EAL meet the requirements of the EAL Quality Assurance Program unless otherwise explained. Analyses of RCRA samples meet the requirements of NELAC and Utah Rule R444-14 unless otherwise explained. CMS

Dear Stuart Hall:

Enclosed are the analytical results for the samples shown in the Laboratory Work Order Summary. The invoice is included with this report or has been mailed to another party as indicated on the chain of custody.

The enclosed data for testing performed at Evergreen Analytical Laboratory (EAL) have been reviewed for quality assurance. A case narrative is included to describe any anomalies associated with the samples or data.

EAL will dispose of all samples 44 days from the sample receipt date. If you want samples returned, please advise us by mail or fax as soon as possible.

A copy of this project report and supporting data will be retained for a period of five years unless we are otherwise advised by you. A document retrieval charge will apply.

Thank you for using the services of Evergreen Analytical. If you have any questions concerning the analytical data, please contact me. Please direct other questions to Client Services.

Sincerely,

A handwritten signature in black ink that reads "Carl Smits".

Notes: Total Xylenes consist of three isomers, two of which co-elute. The Xylene RL is for a single peak. Confirmation analysis was not performed.

Qualifiers: B - Analyte detected in the associated Method Blank, value not subtracted from result
E - Extrapolated value. Value exceeds calibration range

H - Sample analysis exceeded analytical holding time

J - Indicates an estimated value when the compound is detected, but is below the LQL

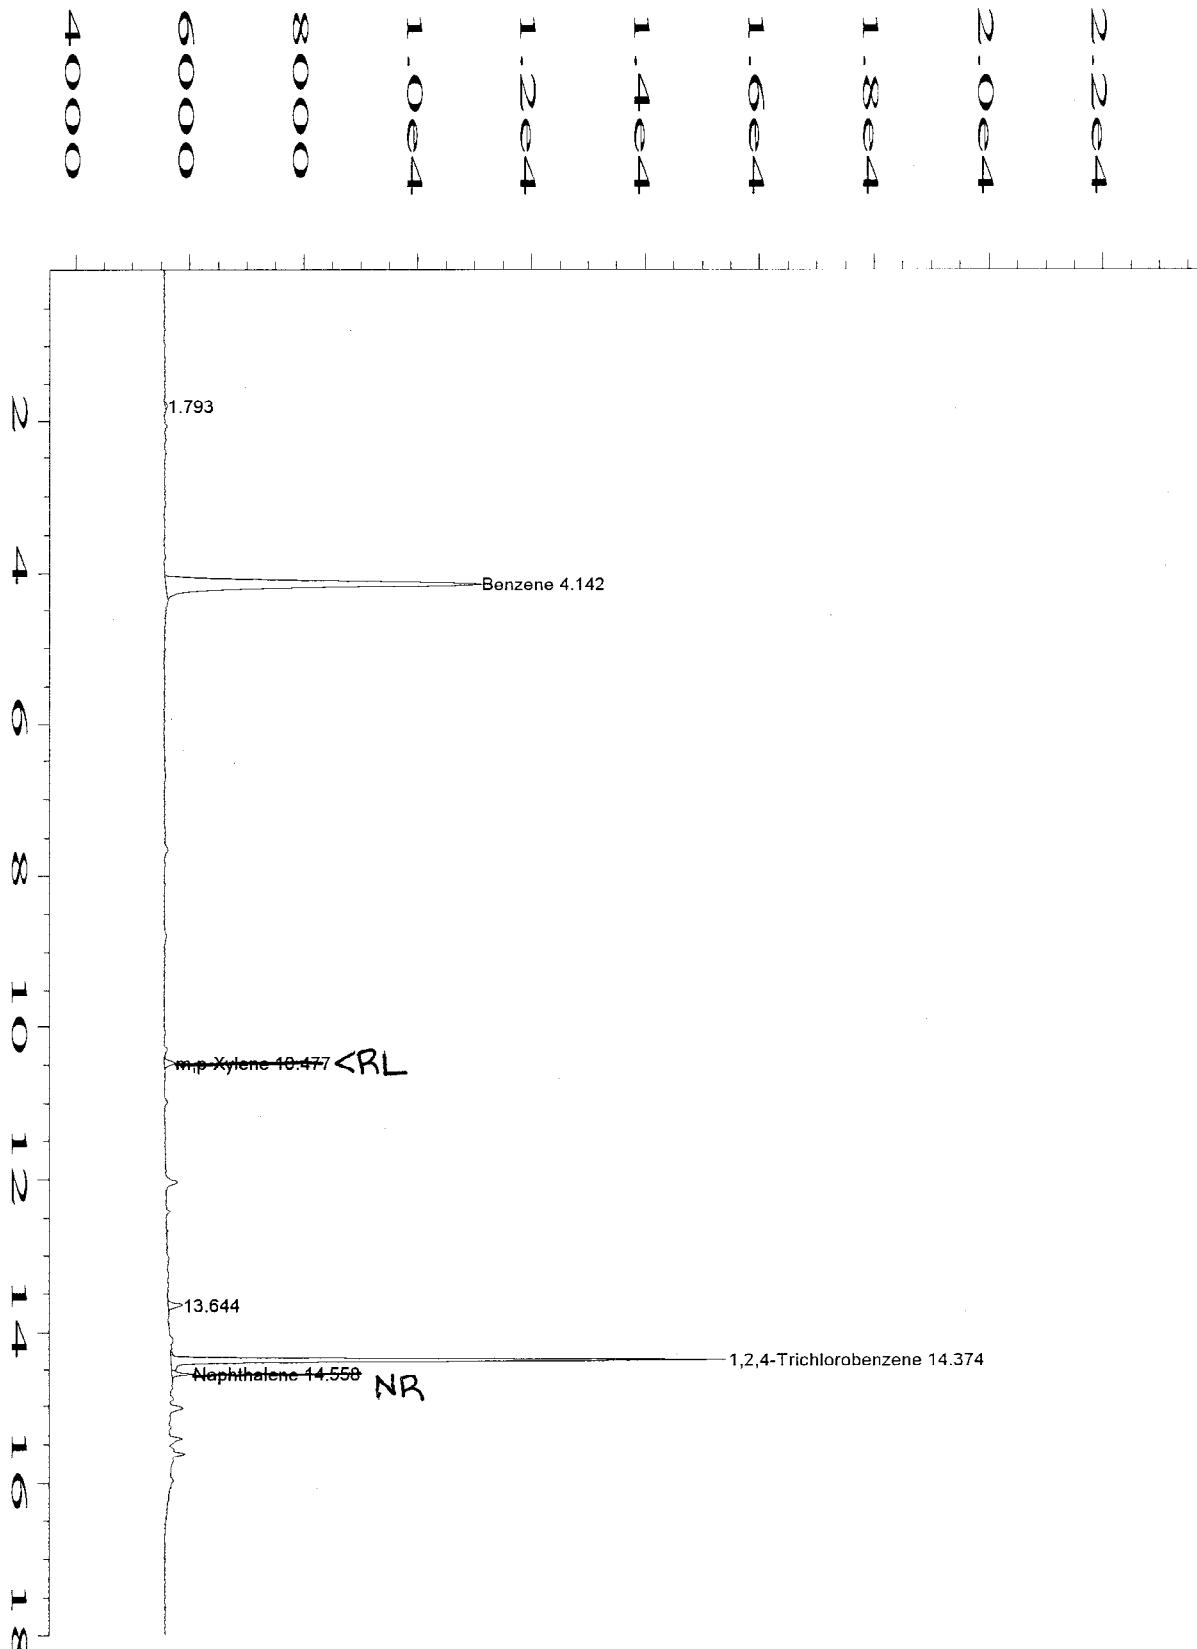

S - Spike Recovery outside accepted limits

U - Compound analyzed for but not detected

X - See case narrative

* - Value exceeded the Maximum Contamination Level (MCL), TCLP limit, or if compound is undetected, LQL exceeds MCL.

Definitions: LQL - Lower Quantitation Limit
Surr - Surrogate

Dear Stuart Hall:

Enclosed are the analytical results for the samples shown in the Laboratory Work Order Summary. The invoice is included with this report or has been mailed to another party as indicated on the chain of custody.

The enclosed data for testing performed at Evergreen Analytical Laboratory (EAL) have been reviewed for quality assurance. A case narrative is included to describe any anomalies associated with the samples or data.

EAL will dispose of all samples 44 days from the sample receipt date. If you want samples returned, please advise us by mail or fax as soon as possible.

A copy of this project report and supporting data will be retained for a period of five years unless we are otherwise advised by you. A document retrieval charge will apply.

Thank you for using the services of Evergreen Analytical. If you have any questions concerning the analytical data, please contact me. Please direct other questions to Client Services.

Sincerely,

A handwritten signature in black ink, appearing to read "Carl Smits".

Custody seals were present and intact.

The temperature of the sample(s) upon arrival was 2.0°C.

Sample(s) were received in good condition, in the proper container, and within holding times.

VOC samples were not preserved.

VOC sample(s) were received with no headspace present. JD

QUALITY ASSURANCE (QA)

Analyses performed on samples in this work order by EAL meet the requirements of the EAL Quality Assurance Program unless otherwise explained. Analyses of RCRA samples meet the requirements of NELAC and Utah Rule R444-14 unless otherwise explained. TP

CLIENT SERVICES

The client did not relinquish the chain of custody. There are no other anomalies to report. EKH

GENERAL CHEMISTRY

There are no anomalies to report. MM

METALS ANALYSIS

Sodium was detected in the method blank (MB) for the 6010 dissolved metals at 0.44 mg/L. This amount was not subtracted from the sample results. There are no other anomalies to report. SS

GAS CHROMATOGRAPHY

Method RSK175: There are no anomalies to report. VM

Method 8021_W: There are no anomalies to report. VM

Notes: Total Xylenes consist of three isomers, two of which co-elute. The Xylene RL is for a single peak. Confirmation analysis was not performed.

Qualifiers: B - Analyte detected in the associated Method Blank, value not subtracted from result

E - Extrapolated value. Value exceeds calibration range

H - Sample analysis exceeded analytical holding time

J - Indicates an estimated value when the compound is detected, but is below the LQL

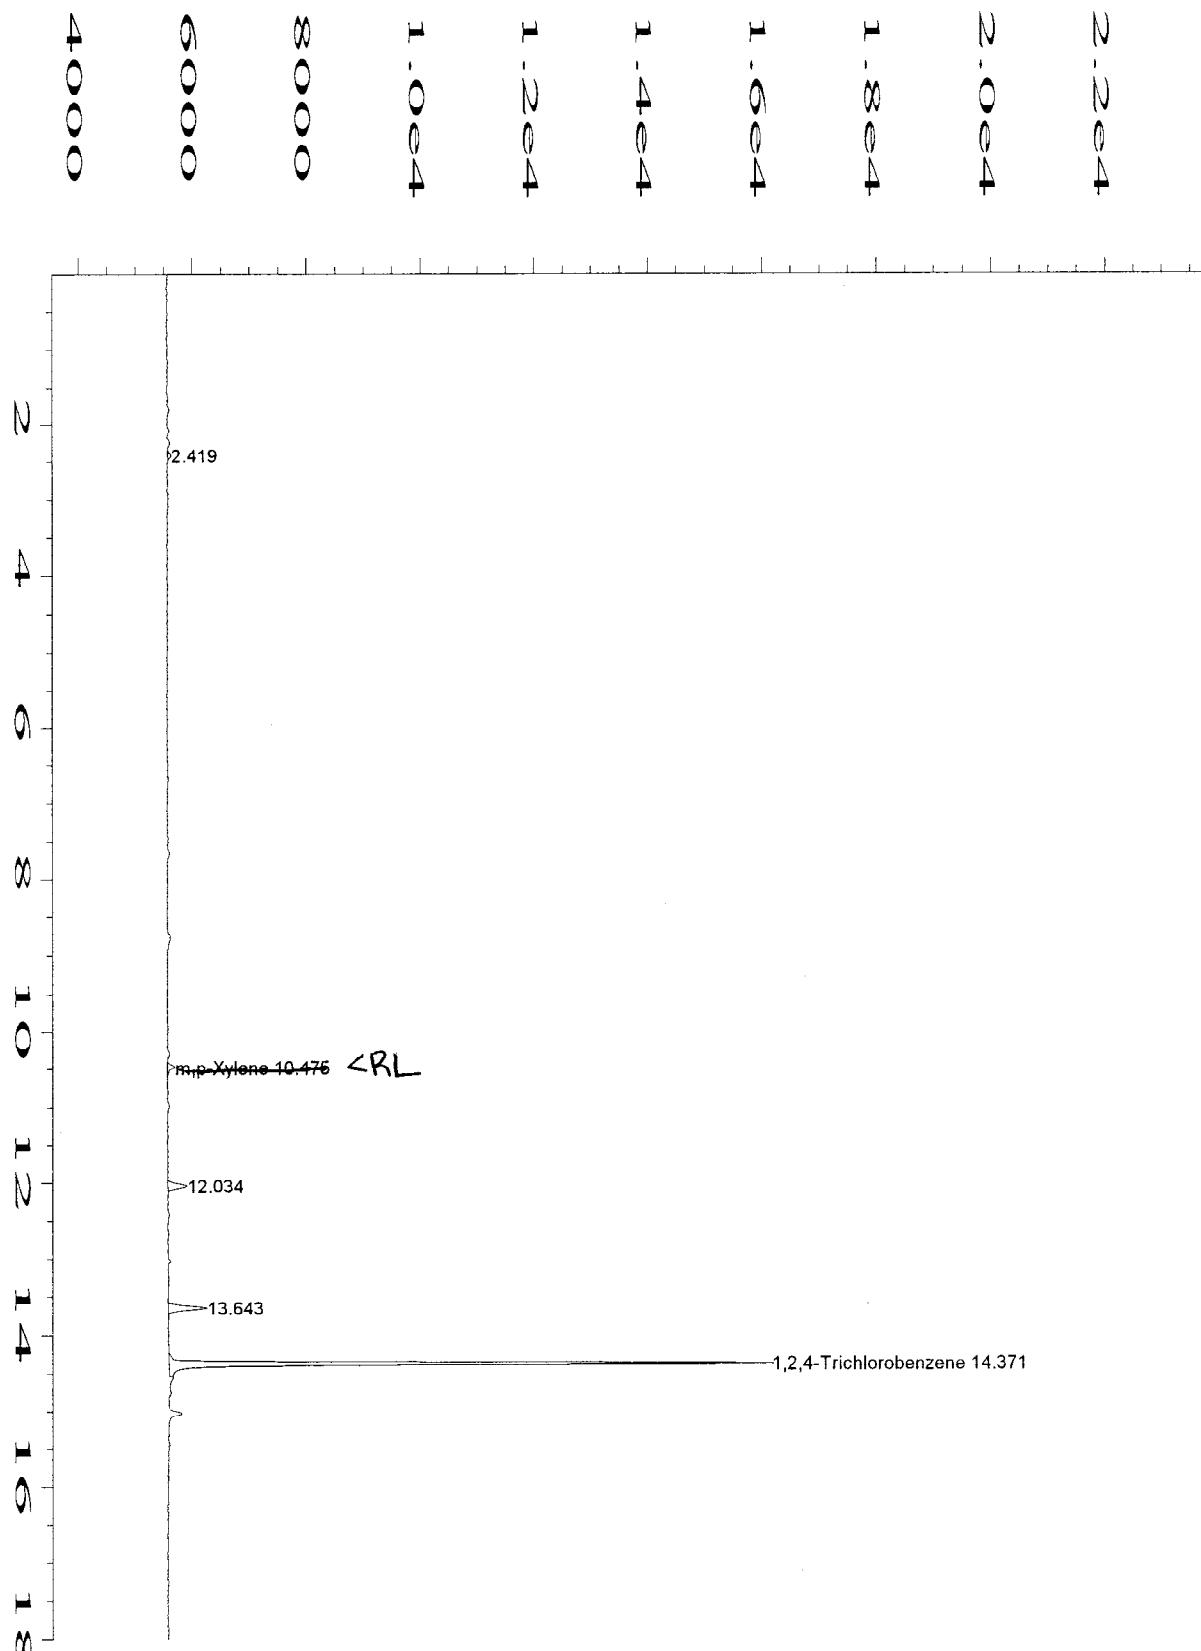

S - Spike Recovery outside accepted limits

U - Compound analyzed for but not detected

X - See case narrative

* - Value exceeded the Maximum Contamination Level (MCL), TCLP limit, or if compound is undetected, LQL exceeds MCL.

Approved

Qualifiers: B - Analyte detected in the associated Method Blank, value not subtracted from result

E - Extrapolated value. Value exceeds calibration range

H - Sample analysis exceeded analytical holding time

J - Indicates an estimated value when the compound is detected, but is below the LQL

S - Spike Recovery outside accepted limits

U - Compound analyzed for but not detected

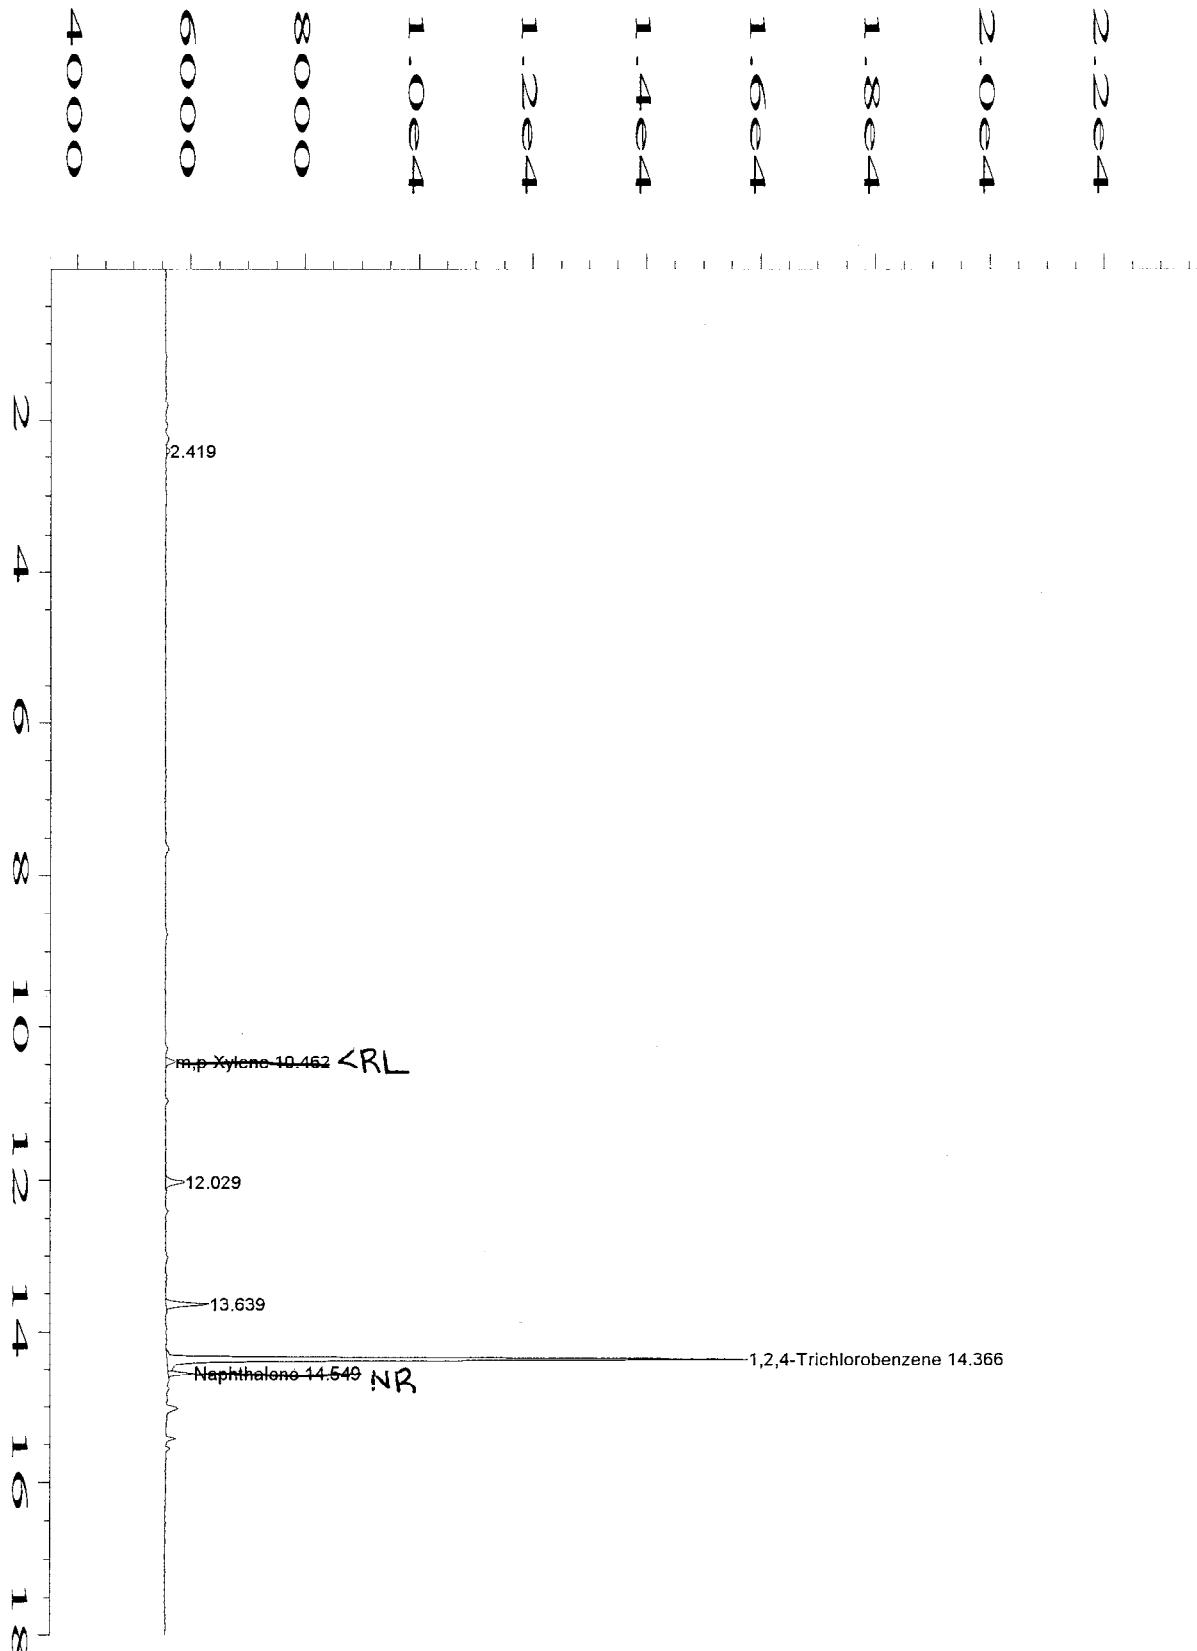

X - See case narrative

* - Value exceeded the Maximum Contamination Level (MCL), TCLP limit, or if compound is undetected, LQL exceeds MCL.

Definitions: DF - Dilution Factor

PF - Prep Factor

LQL - Lower Quantitation Limit

Dear Stuart Hall:

Enclosed are the analytical results for the samples shown in the Laboratory Work Order Summary. The invoice is included with this report or has been mailed to another party as indicated on the chain of custody.

The enclosed data for testing performed at Evergreen Analytical Laboratory (EAL) have been reviewed for quality assurance. A case narrative is included to describe any anomalies associated with the samples or data.

EAL will dispose of all samples 44 days from the sample receipt date. If you want samples returned, please advise us by mail or fax as soon as possible.

A copy of this project report and supporting data will be retained for a period of five years unless we are otherwise advised by you. A document retrieval charge will apply.

Thank you for using the services of Evergreen Analytical. If you have any questions concerning the analytical data, please contact me. Please direct other questions to Client Services.

Sincerely,

Kaprie Hollman/Carl Smits

In certain circumstances, samples submitted to Energy Laboratories, Inc. may be subcontracted to other certified laboratories in order to complete the analysis requested.

This serves as notice of this possibility. All sub-contract data will be clearly noted on your analytical report.

CASE NARRATIVE

ORIGINAL SAMPLE SUBMITTAL(S)

All original sample submittals have been returned with the data package.

SAMPLE TEMPERATURE COMPLIANCE: 4°C ($\pm 2^{\circ}\text{C}$)

Temperature of samples received may not be considered properly preserved by accepted standards. Samples that are hand delivered immediately after collection shall be considered acceptable if there is evidence that the chilling process has begun.

GROSS ALPHA ANALYSIS

Method 900.0 for gross alpha and gross beta is intended as a drinking water method for low TDS waters. Data provided by this method for non potable waters should be viewed as inconsistent.

RADON IN AIR ANALYSIS

The desired exposure time is 48 hours (2 days). The time delay in returning the canister to the laboratory for processing should be as short as possible to avoid excessive decay. Maximum recommended delay between end of exposure to beginning of counting should not exceed 8 days.

SOIL/SOLID SAMPLES

All samples reported on an as received basis unless otherwise indicated.

ATRAZINE, SIMAZINE AND PCB ANALYSIS USING EPA 505

Data for Atrazine and Simazine are reported from EPA 525.2, not from EPA 505. Data reported by ELI using EPA method 505 reflects the results for seven individual Aroclors. When the results for all seven are ND (not detected), the sample meets EPA compliance criteria for PCB monitoring.

SUBCONTRACTING ANALYSIS

Subcontracting of sample analyses to an outside laboratory may be required. If so, ENERGY LABORATORIES will utilize its branch laboratories or qualified contract laboratories for this service. Any such laboratories will be indicated within the Laboratory Analytical Report.

Remarks: Analysis is of gas extracted from water by headspace equilibration. Analysis has been corrected for helium added to create headspace. Helium dilution factor = 0.74

Carbon isotope data for ethane generated using continuous flow GC-C-IRMS method.

nd = not detected. na = not analyzed. Isotopic composition of carbon is relative to VPDB. Isotopic composition of hydrogen is relative to VSMOW. Calculations for BTU and specific gravity per ASTM D3588. Chemical compositions are normalized to 100%. Mol. % is approximately equal to vol. %. Chemical analysis based on standards accurate to within 2%

Explanation of QC Qualifier Codes

Qualifier	Meaning
T8	(ESC) - Additional method/sample information: Sample(s) received past/too close to holding time expiration. Qualifier Report Information ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable unless qualified as 'R' (Rejected). Definitions Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc. Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference. Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses. TIC - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

The data package includes a summary of the analytic results of the quality control samples required by the SW-846 or CWA methods. The quality control samples include a method blank, a laboratory control sample, and the matrix spike/matrix spike duplicate analysis. If a target parameter is outside the method limits, every sample that is effected is flagged with the appropriate qualifier in Appendix B of the analytic report.

Method Blank - an aliquot of reagent water carried through the entire analytic process. The method blank results indicate if any possible contamination exposure during the sample handling, digestion or extraction process, and analysis. Concentrations of target analytes above the reporting limit in the method blank are qualified with the "B" qualifier.

Laboratory Control Sample - is a sample of known concentration that is carried through the digestion/extraction and analysis process. The percent recovery, expressed as a percentage of the theoretical concentration, has statistical control limits indicating that the analytic process is "in control". If a target analyte is outside the control limits for the laboratory control sample or any other control sample, the parameter is flagged with a "J4" qualifier for all effected samples.

Matrix Spike and Matrix Spike Duplicate - is two aliquots of an environmental sample that is spiked with known concentrations of target analytes. The percent recovery of the target analytes also has statistical control limits. If any recoveries that are outside the method control limits, the sample that was selected for matrix spike/matrix spike duplicate analysis is flagged with either a "J5" or a "J6". The relative percent difference (%RPD) between the matrix spike and the matrix spike duplicate recoveries is all calculated. If the RPD is above the method limit, the effected samples are flagged with a "J3" qualifier.
