RE: Soil Investigation Results  
Gore GU A#15-1 (API #05-067-07900)  
La Plata County, Colorado

Dear Mr. Rose:

LT Environmental, Inc. (LTE) is pleased to provide Samson Resources Company (Samson) with this letter summarizing the results of soil investigation activities conducted at the Gore GU A#15-1 (API #05-067-07900) production well site (Site) on March 13, 2009 (Figure 1, Site Location Map). LTE conducted the investigation in response to a release of produced water that overfilled a pit at the Site. The pit fluids traveled downhill through a culvert onto agricultural land. A stock pond identified downgradient of the site was not impacted by the release. The surface spill stopped approximately 200 feet from the stock pond.

## **SOIL SAMPLING**

On March 13, 2009, LTE collected two surface soil samples in the vicinity of the Site to gather preliminary data regarding potential impacts to the soil. One sample (Background) was collected downgradient of the well pad and west of the spill area. The other sample (Impacted) was collected downgradient of the well pad within the spill extent immediately north of the access road. All samples were collected between the ground surface and 3 inches below ground surface (bgs). The sample locations are shown on Figure 2.

The soil samples were placed in clean Teflon-lined glass jars and stored in a cooler with ice in the field. The samples were submitted to Cardinal Laboratories of Hobbs, New Mexico for the analysis of Gasoline Range Organics (GRO) and Diesel Range Organics (DRO). Soil samples were also placed in plastic bags and submitted to Green Analytical Laboratories (GAL) of Durango, Colorado for analysis of calcium, magnesium, and sodium by EPA method 200.7 and calculation of Sodium Adsorption Ratio (SAR).

## **RESULTS**

Movement of pit fluids caused a minor erosion channel extending northwest into the adjacent field. The erosion channel extends approximately 550 feet into the field.

Laboratory analytical results for the Background sample indicate SAR of 1.35 and DRO of <10.0 milligrams per kilogram (mg/kg). Analytical results for the Impacted Sample indicate SAR of 7.77 and DRO of 3,600 mg/kg. Table 1 and 2 present the soil analytical results. The laboratory analytical reports are included as Attachment 1.

## CONCLUSIONS

Based on soil analytical results, the Impacted sample collected north of the access road is above the Colorado Oil and Gas Conservation Commission (COGCC) Concentration Levels of 500 mg/kg for total produced hydrocarbons (TPH) established in Table 910-1 of the Rules. The reported SAR value for the Impacted soil sample is below the COGCC Concentration Level of 12.

It is reasonable to assume that the TPH impact is present throughout the spill area based on the field observations and laboratory analytical results. However, the vertical extent is likely limited. Rather than conducting additional site investigation to confirm the presence or absence of TPH in the spill area and delineate the horizontal and vertical extent of impact, LTE recommends that the impacted soil within the release area be scraped clean. Confirmation samples from the scraped area should be collected to demonstrate that the release has been mitigated. The impacted soil collected can either be land-farmed onsite in a lined and bermed containment or transported offsite for disposal at an approved disposal facility.

LTE can provide Samson with assistance in overseeing the impacted soil removal, collecting confirmation samples, reclaiming the scraped area, and preparing a report documenting field activities.

LTE appreciates the opportunity to provide environmental services to Samson. If you have any questions regarding this report or would like additional information, please contact us at (970) 884-5215.

Sincerely,

LT ENVIRONMENTAL, INC.

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, and Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020.

Samples were received by Green Analytical Laboratories in good condition on 03/13/09.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Debbie Zufelt  
Laboratory Manager
