Marmaton Formation

September, 2009 Colorado Oil and Gas Conservation Commission Hearing

My name is Larry F. Manikowski, and I am currently the Vice President & CFO for Bayhorse Petroleum, LLC. I have a Bachelor's degree in both Finance and Accounting from Northern Illinois University that I received in 1979. I have handled the majority of land work for Bayhorse for the past 3 ½ years, and have worked on the properties that are the subject of this application for the last 4 months. My resume is attached.

In support of our application today, I have prepared three (3) exhibits. The exhibits are attached to my sworn testimony and form the basis for our application to obtain an order to allow for (10) drilling and spacing units of the Marmaton Formation on the subject properties.

Exhibit A. – Location Map.

Exhibit A is a Location Map depicting the affected lands and the outlined (10) 80-acre proposed locations within the Left Hand Field, the distance between the proposed well and other wells, and producing formations with dates and volumes in other nearby wells.

Exhibit B. – Land Map.

Exhibit B is a Land Map depicting the affected lands and the outlined (10) 80-acre proposed locations within the Left Hand Field, showing the mineral, leasehold and surface ownership groupings, and the proposed location with distance to the lease line and offsetting spacing units.

Exhibit C. – Mineral & Surface Ownership by Groupings.

Exhibit C shows the mineral and surface ownership within each of the three (3) groupings as depicted on the Land Map.

As of this date, we have not received any notice of objection or protest to this Application.

I, Larry F. Manikowski, affirm the foregoing testimony and exhibits attached hereto, and further state that the same are true and correct to the best of my knowledge and belief and were prepared by me or under my control.

Dated this 6th day of September, 2009.

Geologic Testimony

Left Hand Field
Docket No. 0909-SP-22

Cause No. 252

Bayhorse Petroleum LLC
80 Acre Spacing Unit Application
Twp 18S - Rge 47W
Sections 28, 27, 34
Marmaton Formation

September Colorado Oil and Gas Conservation Commission Hearing

My name is Rod Vaughn and I am a geologist currently working as President/CEO of Bayhorse Petroleum. I started working in SE Colorado in 1981. I have 36 years experience in the oil business and have worked from the Gulf Coast to the northern Rocky Mountains basins. Much of my career has involved exploration in Utah, Montana and Colorado. I have a BS degree in geology from Fort Hays State University in Kansas and an MS degree in geology from the University of Utah, Salt Lake City.

In support of our application today, I have prepared five (5) exhibits. The exhibits are attached to my sworn testimony and form the basis for our application to obtain an order to allow for 80 acre spacing on the subject properties.

1. Exhibit No. 1, SW-NE Cross Section

This cross section is oriented perpendicular to the depositional trend and structure of the Marmaton reservoir and shows a maximum porosity thickness of 18-20 feet with DST results.

2. Exhibit No. 2, NW-SE Cross Section

This cross section is oriented parallel to the depositional trend and structure of the Marmaton reservoir and shows DST results.

3. Exhibit No. 3, Marmaton (Pawnee Member) Structure Map

This shows the vertical relief and structural trend of the Pawnee Member that contains the pay zone.

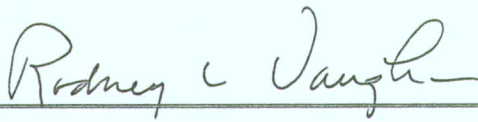

4. Exhibit No. 4, Marmaton (Pawnee Member) Porosity Isopach Map

This shows the porosity thickness and distribution of the reservoir.

5. Exhibit No. 5. Keyes Structure Map with Keyes Sandstone Distribution and Thickness

This shows the relationship of the Keyes structure to the sandstone reservoir.

I, Rodney L Vaughn, affirm the foregoing testimony and exhibits attached hereto, and further state that the same are true and correct to the best of my knowledge and belief and were prepared by me or under my control.

A handwritten signature in cursive script, reading "Rodney L. Vaughn", is written above a horizontal line.

Rodney L. Vaughn

President/CEO

BAYHORSE PETROLEUM, LLC

RESUMES

Rodney L. Vaughn – President & CEO

Mr. Vaughn has 36 years experience in all phases of the oil and gas business that includes work with both major and small independent companies. Most of his career has involved exploration in the Rocky Mountain basins, but he has also worked in the Mid-Continent and Gulf Coast. He has a Bachelor of Science degree from Fort Hays State University (Hays, Kansas) and a Master of Science degree from the University of Utah (Salt Lake City). Mr. Vaughn has hands-on experience in subsurface and seismic methods as well as drilling operations. He has published two geology papers in the American Association of Petroleum Geologists (AAPG) Bulletin and has presented a verbal paper at a Sectional AAPG Convention.

Larry F. Manikowski -- Vice President & CFO

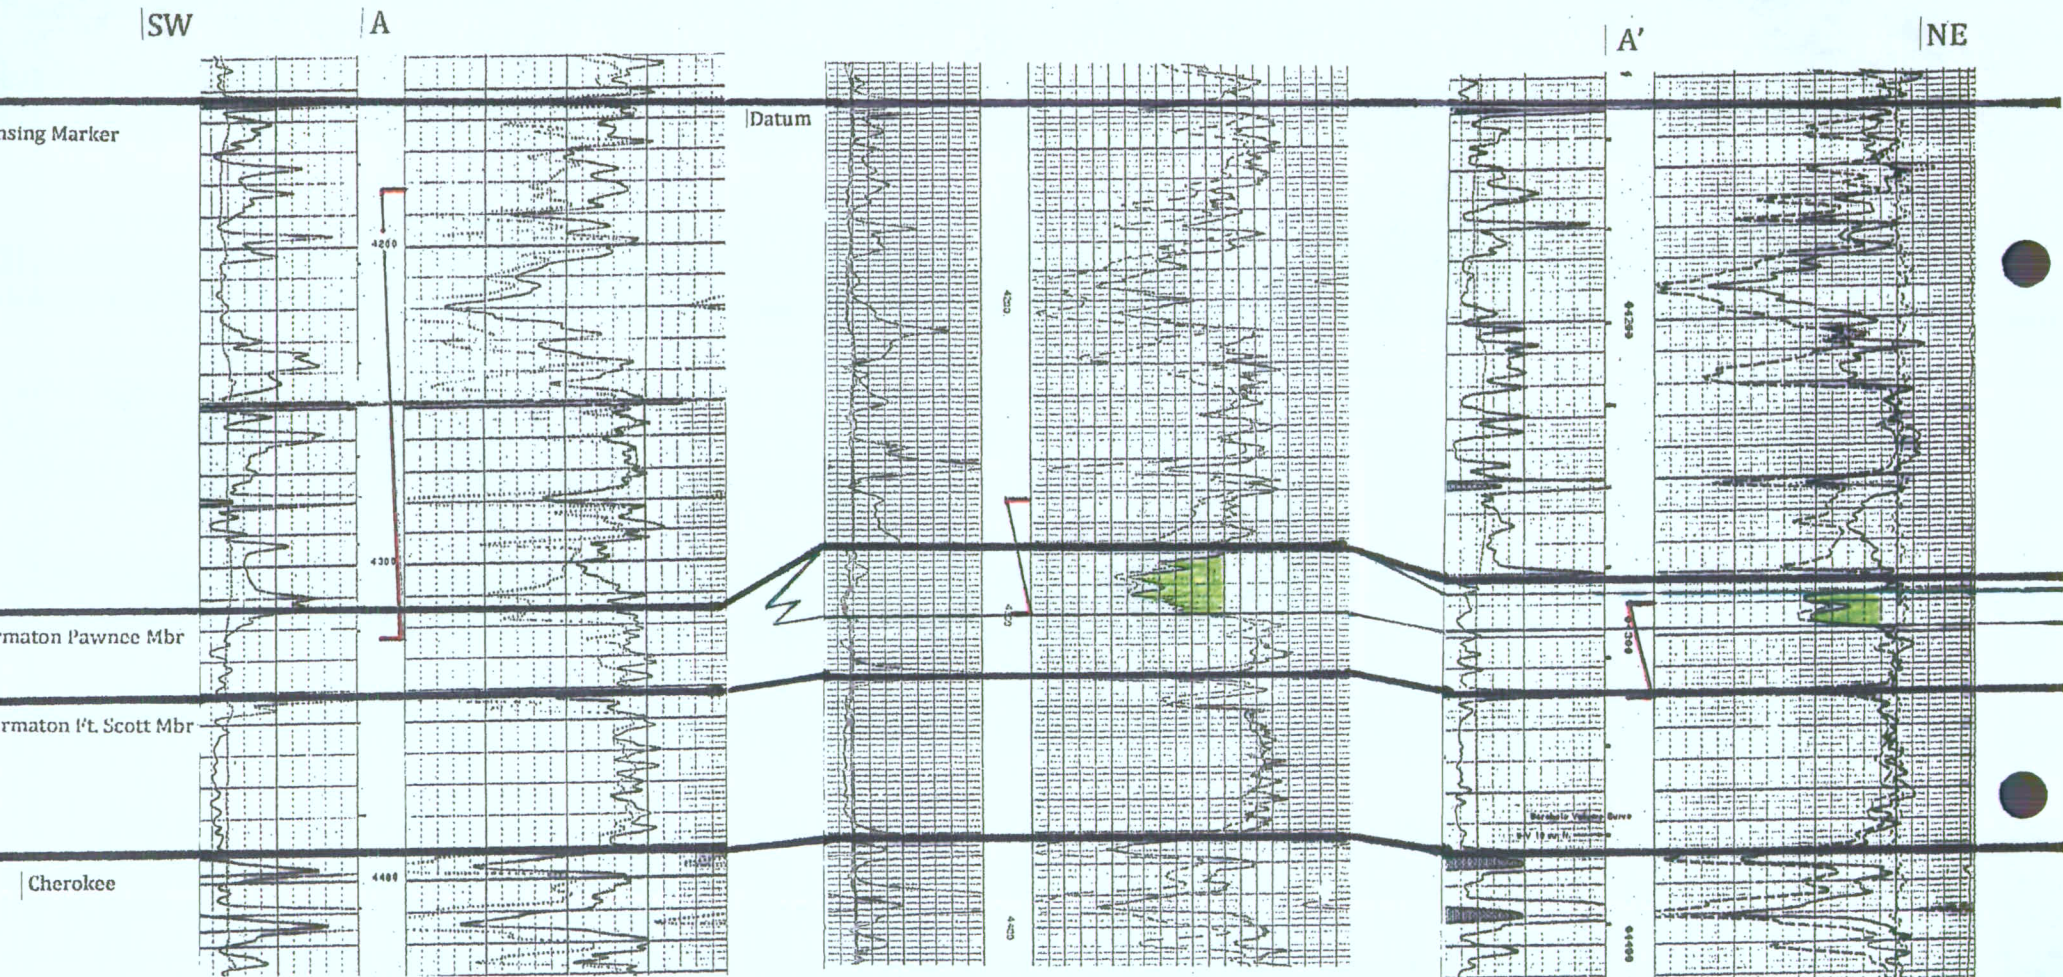

Mr. Manikowski's executive management and experience in finance and accounting in the cable, broadcast, high-tech engineering and manufacturing industries covers more than 30 years. He has experience in startups, company turnaround situations, cash flow management, restructuring and consolidation, budgeting, forecasting, management and controls, computer systems design and implementation, divisional controllership management and manufacturing systems. Mr. Manikowski holds a Bachelor of Science degree in Accounting & Finance from Northern Illinois University. He has also handled the majority of the land work for Bayhorse for the past 3 1/2 years.

COLORADO OIL AND GAS CONSERVATION COMMISSION

APPLICATION OF BAYHORSE PETROLEUM, LLC

**FOR THE ESTABLISHMENT OF SPACING AND WELL LOCATION RULES FOR
CERTAIN LANDS IN THE LEFT HAND FIELD, KIOWA COUNTY, COLORADO**

ENGINEERING ANALYSIS

CAUSE NO. 252 DOCKET 0909-SP-22 SEPTEMBER 24, 2009
By Jack McCartney, McCartney Engineering, LLC

Discussion of Engineering Analysis

I am Jack A. McCartney, Manager of McCartney Engineering, LLC, with offices at 4251 Kipling Street, Suite 575, Wheat Ridge, CO. My curriculum vita is attached. I have testified before the Colorado Oil and Gas Conservation Commission (COGCC) numerous times during the past 30 years. I am familiar with the reservoir and production characteristics of the Marmaton formation in Kiowa County, Colorado and with the application by Bayhorse Petroleum, LLC requesting an order establishing ten 80-acre spacing units for the production of oil and gas from the Marmaton formation in the following described lands in Kiowa County, Colorado:

Township 18 South, Range 47 West, 6th P.M.

Section 27: SW/4

Section 28: E/2, NW/4

Section 34: NW/4

In October 1981 I presented engineering testimony on behalf of Odegard Resources, Inc. in their application for 80-acre drilling and spacing units for an area of approximately 2320 acres in the Left Hand field area. The Odegard application area included the Odegard Resources, Inc. Curtis & Rex Kirby #1 (herein referred to as the Kirby #1) well tract as well as tracts primarily to the north and west of the Kirby #1 well. This application was denied by the COGCC stating *"Evidence presented at the hearing was insufficient to indicate that establishing 80-acre drilling and spacing units was necessary to prevent waste, avoid the drilling of unnecessary wells, or to protect correlative rights; therefore, the application should be denied."*

The testimony entered at the October 1981 hearing was based, in part, on the initial seven days oil production from the Kirby #1 well in September 1981. I assume that the lack of production information and limited geologic control influenced the Commission in their decision. Subsequent drilling and production information has resulted in significantly more information regarding the reservoir configuration and the production potential as demonstrated by the Kirby #1 well. It is necessary to space the area requested in this application in order to pool minor unleased mineral interests and proceed with an orderly development of the application area.

I have prepared three exhibits regarding this application.

Exhibit E-1: Well Performance Estimate

Exhibit #1 is the performance graph of the Kirby #1 well drilled and completed in the Marmaton formation in 1981. This well produced 43,756 bbls oil before being plugged in 1985. The Kirby #1 well is the only Marmaton formation producing well in the township. Three additional wells produced from the Keys and Morrow formation in the immediate vicinity of the application area.

The performance trend exhibited by the Kirby #1 well was extrapolated to estimate the ultimate reserves that might be recovered under current economic conditions. This extrapolation results in ultimate reserves of approximately 63,000 bbls.

Exhibit E-2: Volumetric and Recovery Estimate

Exhibit #2 shows the log analysis of the Marmaton formation in the Kirby #1 well. This analysis shows the estimated original oil-in-place (OOIP) for 80 acres to be 764,197 bbls. This volumetric estimate is based on a matrix density of 2.71 gm/cc, temperature of 125° F, 38° oil gravity, and an initial GOR of 500 scf/bbl. This volumetric estimate of OOIP is somewhat less than my estimate of 796,000 bbls in 1981. The major differences in these two calculations is

that I have a better estimate of the water resistivity resulting in slightly higher calculated water saturations, a higher formation volume factor (1.25 vs. 1.20) based on an apparent higher initial gas-oil ratio, and 2' additional pay (18' vs. 16') based on a higher gamma ray cutoff.

Based on the reservoir thickness of 18 feet, an anticipated primary recovery factor of 15% OOIP and the estimated ultimate recovery of 63,000 bbls, the drainage area calculates to be 44 acres. However, the average reservoir thickness over the potential drainage area is most likely less than 18 feet which would result in a drainage area in excess of 44 acres. Therefore, it is my opinion that the requested 80-acre spacing units are not smaller than the maximum area that can be efficiently and economically drained by one well.

Exhibit E-3: Economic Analysis

With respect to economics, I have estimated the potential recoverable oil based on the performance of the Kirby #1 well. The economic analysis shows the planned development to be economic. Exhibit E-3 shows some of the basics of the economic analysis including the estimated drilling and completion cost of \$480,000 and estimated monthly operating expense of \$1,500 per well per month. Payout is expected to occur in less than one year with a return on investment greater than 3 to 1 and a rate of return in excess of 30%. This analysis shows that the planned development of these 80-acre spacing units is expected to be economic.

Summary and Conclusions:

This application is a request for an order to allow 80-acre spacing for ten tracts. These tracts are located in the Left Hand field in Kiowa County, Colorado.

Historic performance of the Kirby #1 well indicates potential recovery of 63,000 bbls based on current economic conditions.

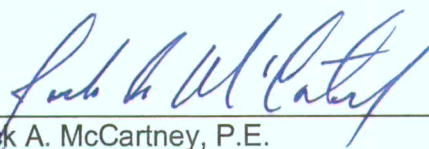

Drilling and spacing units of 80 acres will result in a reasonable and economically efficient development of the application lands, assist in preventing waste, avoid the drilling of unnecessary wells, and protect correlative rights. The requested 80-acre spacing units are not smaller than the maximum area that can be efficiently and economically drained by one well.

I respectfully request that the Bayhorse Petroleum, LLC application for the establishment of ten 80-acre spacing units be approved.

I, Jack A. McCartney, affirm the foregoing testimony and exhibits attached hereto, and further state that the same are true and correct to the best of my knowledge and belief and were prepared by me or under my control.

RESPECTFULLY SUBMITTED this 7th day of September, 2009.

Jack A. McCartney, P.E.

EDUCATION

Graduated from the Colorado School of Mines in 1965 with the degree of Petroleum Engineer and in 1971 with the degree of Master of Engineering (Petroleum Engineer).

Industry short course, University of Oklahoma.
Various continuing education courses.

REGISTRATION

Registered Professional Engineer: Colorado #14618

EXPERIENCE

From 1965 to 1968, he was employed by Kerr McGee Corporation as a production engineer. His responsibilities included well completions, workovers, and recommendations of infill drilling locations, primarily offshore Louisiana. After a brief period with Kerr McGee in Calgary, Canada, he joined National Cooperative Refinery Association as a reservoir engineer. During his three years with NCRA, his duties included property evaluation, secondary recovery, and unitization. He also attended night school at this time and received his Masters Degree with emphasis on reservoir engineering and enhanced recovery methods. From 1971 to 1972 he was employed by Scientific Software Corporation in Denver, and later in Houston, where he performed reservoir simulation studies. He then joined Davis Oil Company in Denver as their reservoir engineer. He was responsible for secondary recovery projects, unitization, and evaluation of the Company's oil and gas properties for loan negotiations.

In September of 1973, he formed McCartney & Associates, later to become McCartney Engineering, LLC, for the purpose of providing consulting services in the areas of property management, secondary and enhanced recovery, reservoir engineering, property evaluation, and expert testimony.

During the past thirty-six years he has continued to be actively involved in reservoir studies, reserve and revenue forecasting, oil and gas property appraisals, secondary recovery feasibility studies, property management, and petroleum software development. He also has served on numerous occasions as an expert witness before the Oil and Gas Regulatory Commissions in Colorado, Wyoming, Montana, Nebraska,

and North Dakota regarding matters ranging from well spacing applications to field unitization. He has also given expert testimony in civil litigations with respect to oil and gas related matters.

Mr. McCartney managed field operations in the Denver Basin for Macey Mershon Oil & Gas, Inc. during the late 1970's. McCartney Engineering, LLC owns interests in oil and gas properties and operates wells in Colorado and Wyoming.
