No problem, Larry. We will do whatever necessary to comply. Thanks, Mari

This building was used on the 2a (214' furthest well from the building) but by the time Noble got to the closest well on the pad, it ignored this building and measured to another building. We take this safety setback thing very seriously. I am going to have to talk to Tom Kerr on this one.

Larry this is actually just a shed. Do we need to do something in particular for this? We will be using a 76' tall rig with mast & 1/2 @ 114'.

Mari

This well is approx. 135 feet from a building.
