Hi Dave,

A reserved pit will be constructed in the event a close loop system will not be utilized.

Please include the following items to #5 Facilities if they are not already included in the 2A.

- 1 Drilling Pit
- 1 Special Purpose Pit
- 1 Lact Unit
- 1 Oil Pipeline
- 1 Electric Generator

I agree the water well to the southwest has a static water level of 39 feet.

Let me know if you need anything else.

Thanks!

Jennifer,

I have been reviewing the Simba 1-06 (#2089077) Form 2A. COGCC requests the following clarifications regarding the data EOG Resources has submitted on or attached to the Form 2A prior to passing the Oil and Gas Location Assessment.

1. Facilities (Section 5): Form 2A does not indicate a drilling pit, however, the construction layout drawings show a reserve pit. Since a closed loop system is not indicated, I assume that a drilling pit will need to be constructed. I can make the change if you send me an email with this request.
2. Water Resources (Section 14): Form 2A indicates the depth to groundwater to be 30 feet bgs for a well located 6019 feet away from the proposed pad. COGCC's review indicates there is a closer water well (Permit No. 128446-Nussbaum, stock well) to the south-southwest, with a total depth of 60 feet bgs, a depth to groundwater of 39 feet bgs, and a pumping rate of 15 gpm. I can make the change if you send me an email with this request.

COGCC would appreciate your concurrence with attaching these COAs to the Form 2A permit prior to passing the OGLA review. This issue is very minor and I would like to get this passed. If you have any questions, please do not hesitate to call me at (970) 625-2497 x5 (office) or (970) 309-2514 (cell), or email. Thanks.

Dave
