

Best Management Practices

Rosetta Resources Operating LP proposes to utilize the following Best Management Practices (BMP's,) where appropriate, to prevent or reduce impacts caused by our oil and gas operations:

- When building new well sites, limit the surface area to be disturbed to just that which is needed. When a new well is drilled and put on production, reclaim the unneeded well pad to reduce the disturbed surface area and allow the landowners to use it for agriculture.
- Return the land to near pre-use condition by reforming the surface to match the surrounding area including: terracing, drainage replacement/repair, and re-seeding with native grasses as specified by the Soil Conservation Office.
- Spray to control noxious weeds on our locations annually.
- Inspect our sites for erosion and install erosion controls such as culverts or find an alternate road route that is less likely to erode.
- As much as possible, utilize low impact 2 tracks on lease roads.
- Fill drill site pits within 120 days after completion of a new well subject to pit moisture and weather.
- Hydrocarbon storage tanks are surrounded by impermeable berms to prevent spills from migrating off-site.
- Open top tanks and unattended pits that might contain hydrocarbon are fenced and covered with nets to protect migratory fowl and animals.
- Plans are in place to prevent, control, and cleanup hydrocarbon spills.
