Hi Rob,

I went out to the field on the 18<sup>th</sup> and took new pictures and have attached them for your reference and review. As you can see the area is flat and there is no standing surface water as far as the eye can see. However, I agree that the air photo you sent reflects a buffalo wallow, if you will, there. So, I concur with your change as an ephemeral playa 530' away and that no COA is required.

Thanks Rob! Hope your day is going well!!

Janice

Hi Janice,

Did you get a chance to review the air photo. Let me know if you agree with my changes below so I can finish my review of this form.

Thanks,  
Rob

No problem Janice, It's on our 2009 aerial photographs and unfortunately they are not viewable by the public right now for some reason. IT is working on it.  
The outline of the playas is visible in the 2005 series photos although it's easier when you already know where to look.  
I will send you a screen print early next week.

Hi Robert,

I'm sorry to be a pain, but could you please double check that again for me? I don't see any surface water within 2,100 feet + of that site.

Thanks,  
Janice

Hi Janice,

COGCC has reviewed the above referenced Form 2A and have the following concerns:

1. Water Resources:

- Please approve me changing the distance to nearest surface water from 2,140 feet to 530 feet; no COAs will be required due to this change.

Please approve me removing the "No COAs are needed for this location." comment from the Comments section.

Please let me know if you have any questions or need additional information, thanks,
