Livestock: <u>NA</u> Water wells: <u>2,036</u> Depth to shallowest ground water: <u>unknown</u>	
Cause of spill (e.g. equipment failure, human error, etc.): <u>equipment failure</u>	Detailed description of the spill/release incident:
Welded patch over historic hole on one aboveground storage tank (AST) failed and caused condensate to release into the secondary containment berm at approximately 12:30AM on 7/18/08. No sensitive receptors appear to have been threatened by the release.	

**CORRECTIVE ACTION**

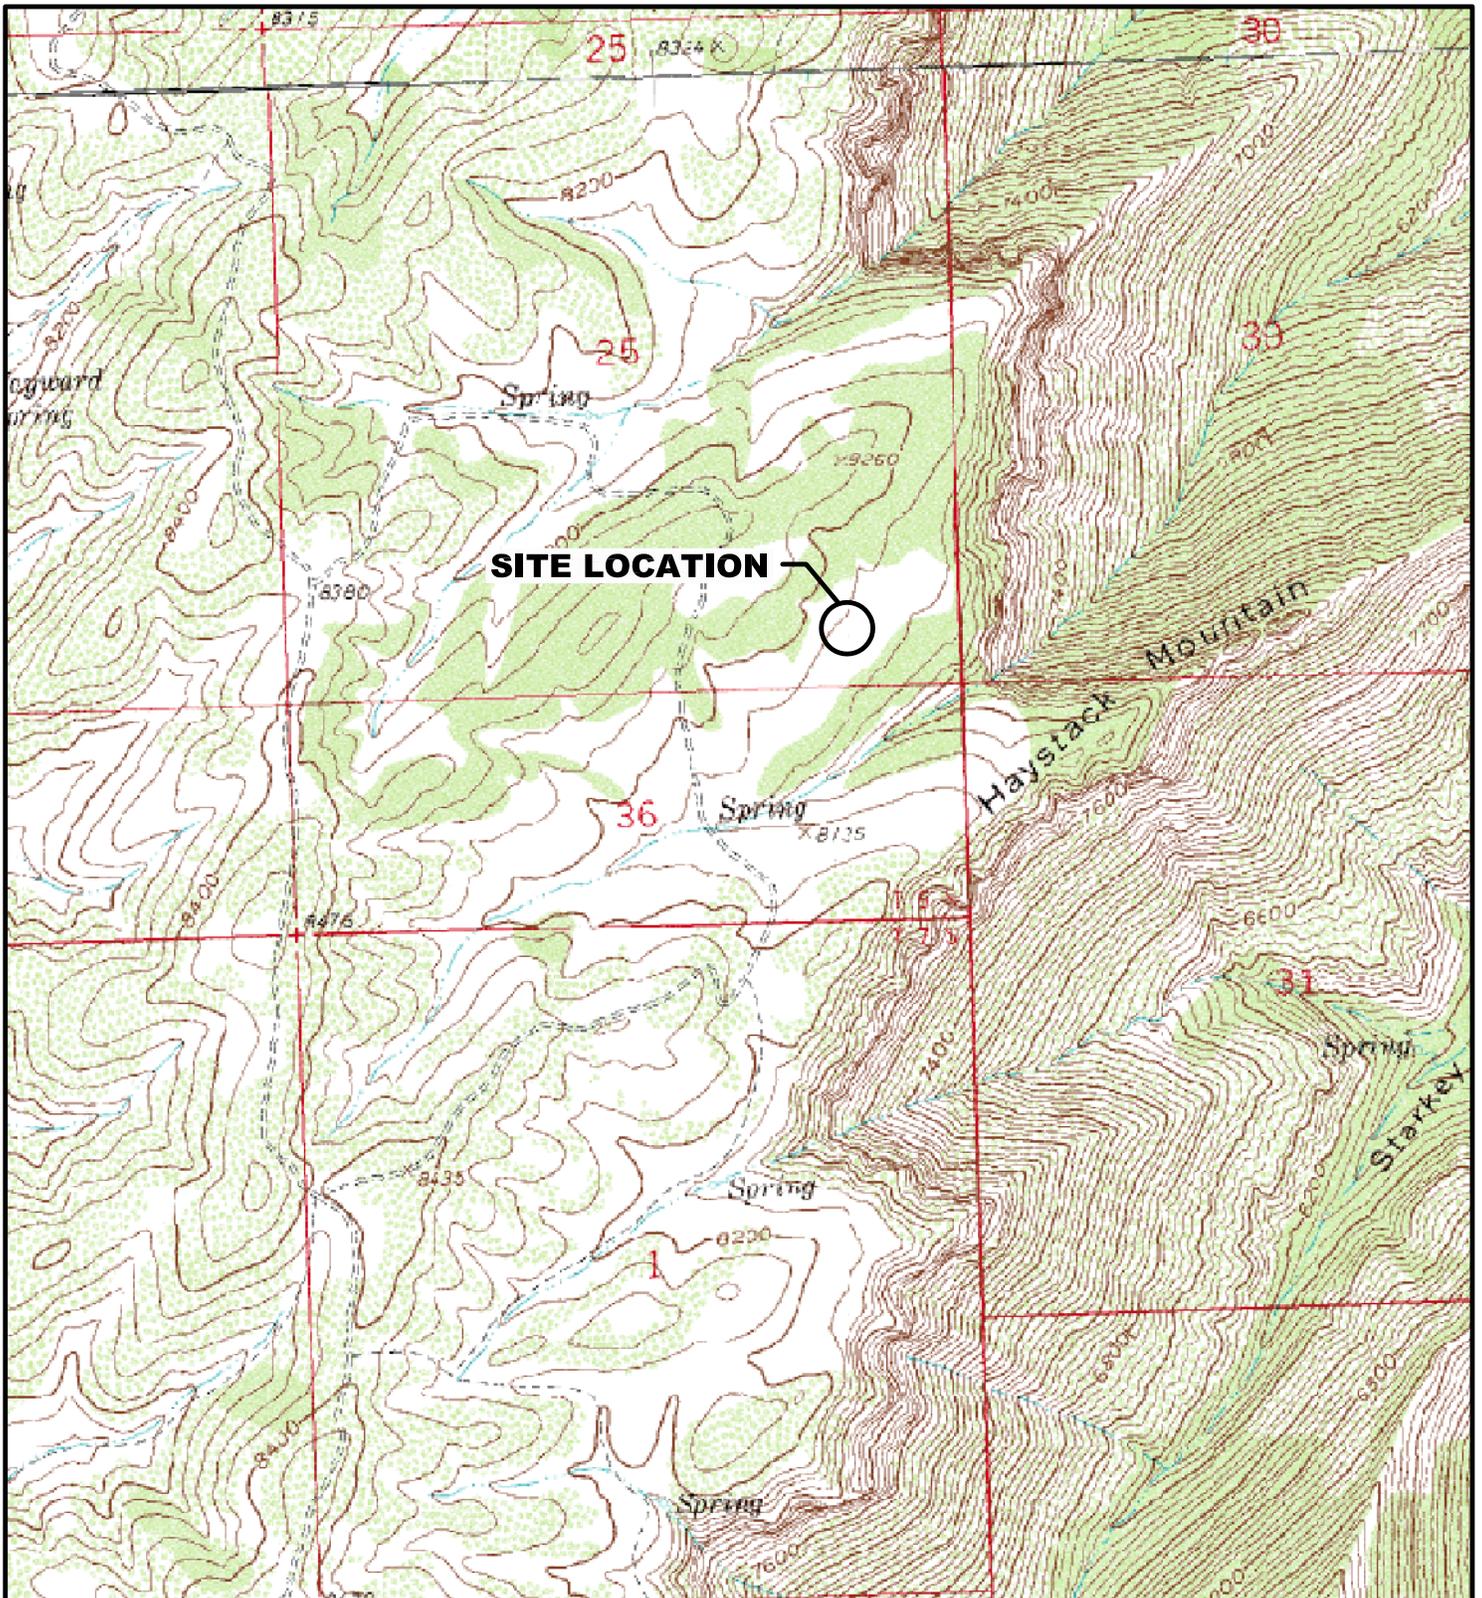

Describe immediate response (how stopped, contained and recovered): <u>Condensate within secondary containment berm was recovered with a vacuum truck and transported off site. Observations in daylight noted soil staining outside the secondary containment berm suggesting the lined secondary containment may have a leak. Currently, ASTs and containment are being removed so soils beneath the containment can be inspected.</u>
Describe any emergency pits constructed: <u>NA</u>
How was the extent of contamination determined? <u>To be submitted in Form 27.</u>
Further remediation activities proposed (attach separate sheet if needed): <u>Excavate soil beneath ASTs and dispose off site. Form 27 to be submitted.</u>
Describe measures taken to prevent problem from reoccurring: <u>The ASTs at the site are being replaced with new ASTs.</u>
