Steve,

Assuming that BLM agrees, please proceed with your 1" top out.

Thanks,

Hello, this well was cemented on 6/16/10 and during the cement job we did not have circulation to surface. We logged this well over the weekend with the isolation scanner and from the raw acoustic impedance you can see a clear TOC at 566' (fades from brown to yellow), which is ~1,000' above the port collar located at 1,570'. We would like your approval to run in with 1" tubing as deep as we can and perform a top off job. Please let me know if you approve as soon as possible as we are planning to move on to this quad after the current well we are drilling and would like to remediate before doing so. Thank you.

Here is the link to the ultrasonic image online.
