**RE: Soil Investigation Results  
Huber-Burkett #1-25  
La Plata County, Colorado**

Dear Mr. Montoya:

LT Environmental, Inc. (LTE) is pleased to provide XTO Energy, Inc. (XTO) with this letter summarizing the results of soil investigation activities conducted at the Huber-Burkett #1-25 (Site) on August 16, 2010 and November 4, 2010 (Figure 1). LTE conducted the investigations at the request of XTO as part of the closure of a former pit tank used as secondary containment for a produced water tank. The tank was removed as part of tank battery upgrade activities.

Results from initial soil sampling indicated that elevated arsenic concentrations existed within the pit. LTE recommended scraping the sidewalls and floor of the pit and mixing the soil with clean fill to decrease arsenic concentrations. Additional samples were collected following this work. The new results indicated that arsenic concentrations within the mixed soil were similar to concentrations of arsenic occurring naturally at the Site.

### **SOIL SAMPLING**

On August 16, 2010, LTE collected two soil samples at the Site. A composite soil sample (labeled "Huber-Burkett #1-25") was collected from the earthen floor and walls of the pit. The depth of the pit floor was approximately 6 feet below ground surface (bgs). One background sample (labeled "Huber-Burkett #1-25 BG") was collected immediately adjacent to the well pad. Sample locations are shown on Figure 2.

Figure 3 shows the location of soil samples collected after the sidewalls and floor of the pit were scraped and soil was mixed with clean fill. A second composite sample (labeled "Composite 1") was collected on November 4, 2010 from the mixed material. Two additional background samples (labeled "Background 1" and "Background 2") were also collected west of the well pad.

All of the soil samples were placed in clean Teflon-lined glass jars and Ziploc bags and stored in a cooler with ice in the field. The samples were submitted to Oxidor Laboratories (Oxidor) of Plano, Texas and Environmental Science Corporation (ESC) in Mt. Juliet, Tennessee. The initial pit soil sample was submitted for the analysis of electrical conductivity (EC), sodium absorption ratio (SAR), pH, and total metals (arsenic, barium, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, and zinc) in soils. The metals analysis was performed using EPA

Method 610B, with the exception of mercury which was analyzed by the EPA Method 7471A. The second pit sample and all background samples were analyzed for arsenic only.

## RESULTS

Tables 1 and 2 present the soil analytical results and the complete laboratory analytical reports are included as Appendix 1. Analytical results for pH, EC, SAR, and metals indicate that the values measured in the original pit sample did not exceed the regulatory levels defined in the Colorado Oil and Gas Conservation Commission (COGCC) Table 910-1, with the exception of arsenic. Arsenic was detected in the pit sample at a concentration of 11.4 milligrams per kilogram (mg/kg). The original background sample indicated that arsenic was detected at a concentration of 3.53 mg/kg. Arsenic was detected in the second pit sample, which was collected after mixing, at a concentration of 6.2 mg/kg. The two additional background samples collected on November 4, 2010 contained arsenic concentrations of 3.7 mg/kg and 17.0 mg/kg.

## CONCLUSIONS

Soil sample analytical results indicate there are no impacts above the regulatory levels listed in COGCC Table 910-1, except for elevated arsenic concentrations. However, similar concentrations in background samples suggest that high concentrations of arsenic occur naturally at the Site. LTE recommends XTO request a determination of No Further Action for the closure of the pit, then backfill the excavation to the existing pad grade.

LTE appreciates the opportunity to provide environmental services to XTO. If you have any questions regarding this report, please contact us at (970) 385-1096.

Sincerely,

LT ENVIRONMENTAL, INC.

Travis Laverty  
Staff Geologist

Ashley L. Ager, M.S.  
Senior Geologist/Office Manager

## Case Narrative

### Project Name: XTO CO Soil

D-1	Elevated reporting limit(s) due to dilution. Dilution resulted from sample matrix interference, high target analyte(s), high non-target analyte(s) or a combination thereof.
E-1	Not covered under scope of NELAC accreditation.
ppm	Parts per million = mg/Kg or mg/L
ppb	Parts per billion = ug/Kg or ug/L
MQL	Method quantitation limit
SDL	Sample detection limit (reflects any laboratory adjustments made to the sample during analysis such as dry weight or dilutions)
SQL	Sample quantitation limit (reflects any laboratory adjustments made to the sample during analysis such as dry weight or dilution)
ND	Analyte not detected at or above SQL
LCS/LCSD	Laboratory control spike / Laboratory control spike duplicate
MS/MSD	Matrix spike / Matrix spike duplicate
RPD	Relative percent difference
Sub	Analysis performed by subcontract laboratory

*Solid sample results reported on a dry weight basis for all applicable analysis, unless otherwise noted. Dry weight calculations based upon % solids obtained as outlined in EPA method 5035 section 7.5*

Metals CCV percent deviation of Sodium for QC Batch ID META\_02413\_L was slightly outside Oxidor QC limits.

This report is intended only for the use of LT Environmental and may contain information that is privileged and confidential. It may not be reproduced in full (or in part) without the expressed written permission of LT Environmental and Oxidor Laboratories, LLC.

Oxidor Laboratories, LLC certifies to the best of its knowledge that all results contained in this report are consistent with the National Environmental Laboratory Accreditation Program, except where otherwise noted.
