Cause of spill (e.g., equipment failure, human error, etc.): EQUIPMENT FAILURE & HUMAN ERROR Detailed description of the spill/release incident:

The water drain valve on the production tank began leaking. During an attempt to remove and replace the valve the fluid in the tank was spilled. The fluid was contained within the berm around the tank.

CORRECTIVE ACTION

Describe immediate response (how stopped, contained and recovered):

The spill was contained within the tank berm. A vac truck was used to recover as much fluid as possible.

Describe any emergency pits constructed:

NA

How was the extent of contamination determined:

Due to tank level differences before and after the spill. Also by digging down in the soil to find the saturation point.

Further remediation activities proposed (attach separate sheet if needed):

\*Please see attachment

Describe measures taken to prevent problem from reoccurring:

Training will be done on the proper way to replace valves so that situations like this can be avoided in the future.

Steve Lindblom:

**CORRECTIVE ACTION (cont. from form 19)**  
**Further remediation activities proposed...**

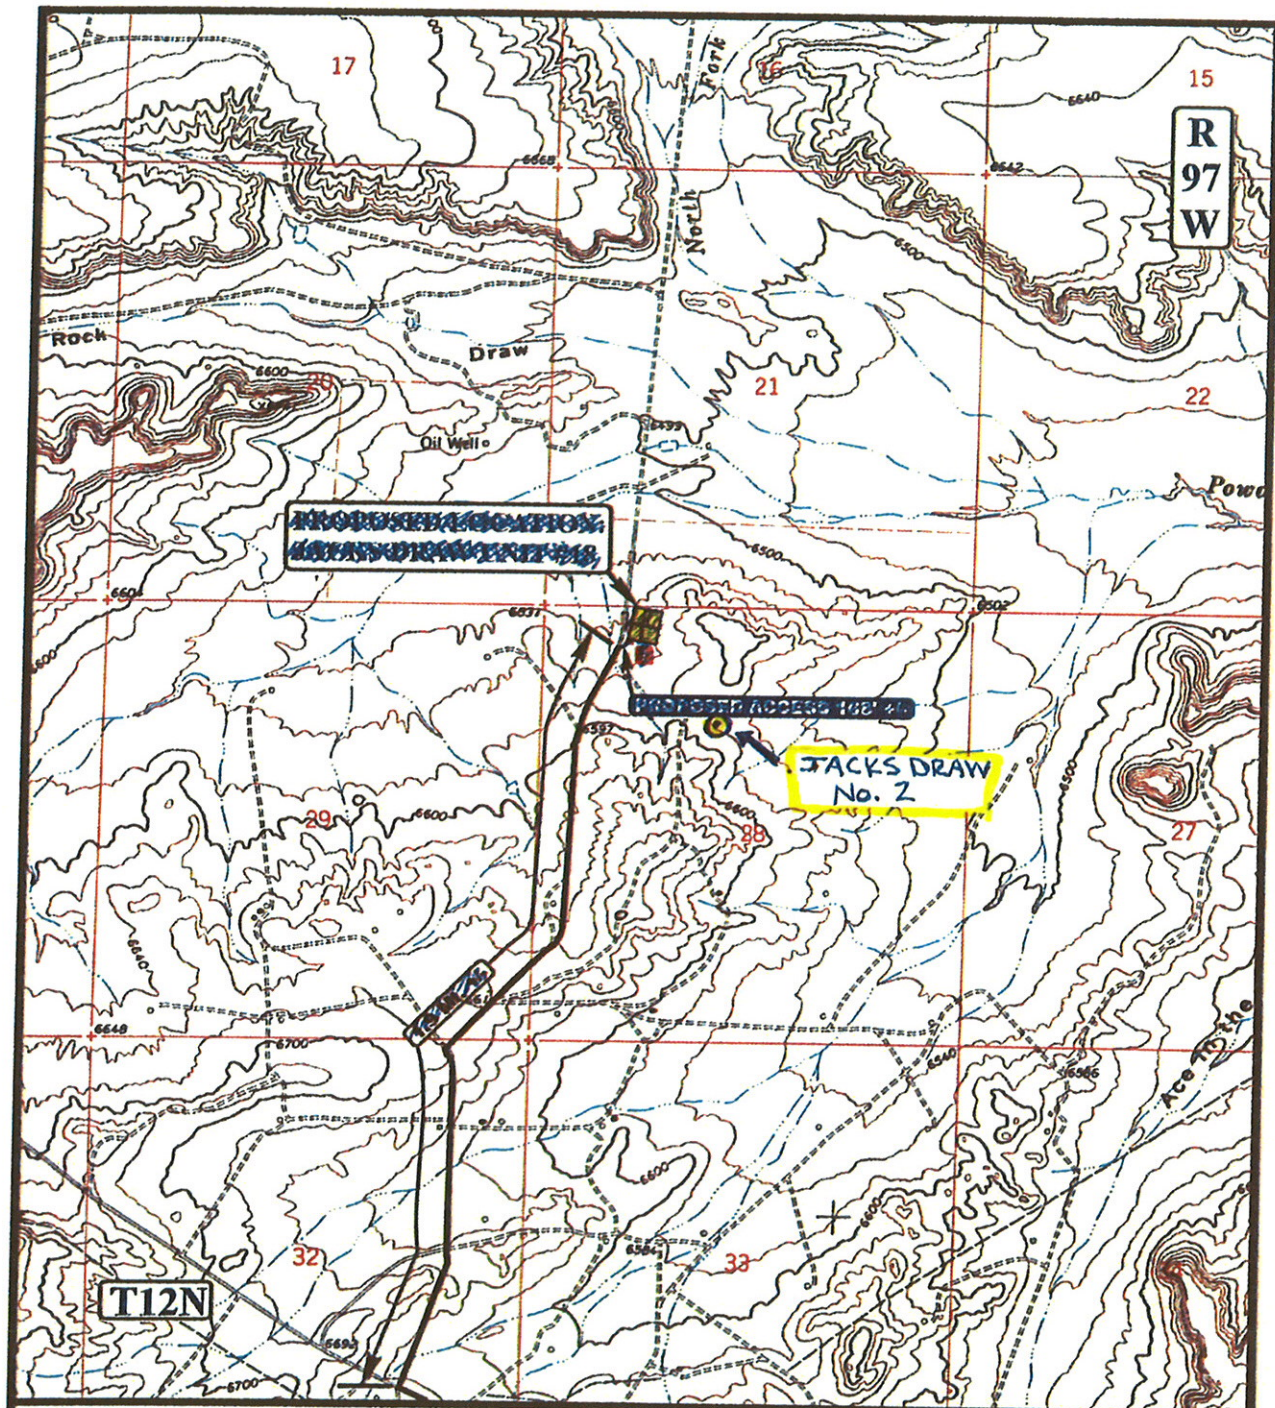

Wexpro has taken initial soil samples, ripped and tilled the contaminated soil, and has also added, oil gator and fertilizer to the contaminated soil. Following the clean-up process soil samples will be taken and analyzed for TPH levels. A TPH level report will then be submitted to the proper agencies.

If you require further information, please contact me.

Sincerely,
