Mike,

Just to clarify for the record, a report dated January 16, 2008 submitted by Cordilleran for Williams references an incident that occurred on May 30, 2007 at Chevron TR 33-1-597. According to your response below, this report summarizes remedial activities that are responsive to Spill Report #1433678, dated June 8, 2007. This report will be uploaded and linked to this Spill Report in the COGCC data base.

Based on the information submitted, COGCC requires no further action at this time in regard to the two releases that occurred in 2007 at the subject location. Releases [#1433678](#) and [#1630732](#) have been changed to closed status in the Colorado Oil & Gas Information system. Please retain a copy of this email as verification of COGCC concurrence with the closure request.

Please call me at 719-213-6109 or Alex Fischer at 303-894-2100 ext. 5138 if you need any additional information.

Thanks,

Nancy Prince

Nancy,

I no longer have records going back to 2007 readily available; however, I'm confident that there were two incidents that occurred at this location in 2007:

- 1) The seep incident that was reported in June 2007, and
- 2) A release from on-site production equipment that was reported in August 2007.

The cover sheet from the Cordilleran report that you sent to me was associated with the seep incident that was reported in June 2007.

Mike,

The Cordilleran report says that the trench was constructed week of June 11, and a second during week of June 25. Weekly samples were collected from 6/19 thru 7/27. Domestic spring 6/14 to 7/27.

Hope this helps.

Again, Thanks for your help with this.

Nancy
