Detailed description of the spill/release incident: Because of valve misalignment, fluids from the water gathering line entered into the 620-43-32 tanks resulting in a produced water and a condensate tank overflow into and adjacent to the unlined secondary containment.		

CORRECTIVE ACTION

Describe immediate response (how stopped, contained and recovered):
The water gathering valve was fully closed and locked out to prevent reoccurrence. A water hauler extracted the free fluids from the secondary containment and drew the tank levels down.

Describe any emergency pits constructed:
None were constructed.

How was the extent of contamination determined:
Automation data.

Further remediation activities proposed (attach separate sheet if needed):
Currently under investigation. Form 27 to follow.

Describe measures taken to prevent problem from reoccurring:
Currently under investigation.

Spill/Release Tracking No: 2213208

An aerial photograph of a coastal region, likely in Alaska, showing a network of roads and a large body of water. A red rectangular box is drawn on the map, highlighting a specific area near a road. Inside this box, there are several small, dark, irregular shapes that appear to be the result of a spill. A red arrow points from a text box to the bottom-left corner of the red box. The text '620-43-32 Pad' is written in red below the box, and the number '20' is written in black below that. The map shows a mix of green land, blue water, and grey roads.
