Todd,

Thank you for looking for additional records on this older spill report. The spill was reported as being 5 bbl of water, and review of aerial photos indicate that there was no area of stressed vegetation in the farm field one year later. COGCC therefore requires no further action at this time in regard to the release at the subject location. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be significantly impacted, then further investigation and/or remediation activities may be required at the site.

The release (SPILL #1981717) has been changed to closed status in the Colorado Oil & Gas Information System. Please retain a copy of this email as verification of COGCC concurrence with the closure request.

Please give me a call if you need any additional information.
Thanks,

Nancy Prince

Hi Nancy,

I regret to inform you that Noble Energy, Inc cannot come up with any of the information you are requesting. We have searched all of our archive files and cannot produce a Form 27 or any analytical lab results from the Petro-Canada records pertaining to the flow line leak they had on March 28, 2008. Please advise as to what you want Noble Energy to do to help you close this file.

Thank you
Todd

Thanks for the update. I hate having to ask for the old stuff like this, but it is good to be able to close things out!

Nancy,

Just wanted to let you know that I haven't forgotten about this project. I have a call into our archive department and will hopefully get a response in the next few days.
As soon as I get the file I will go through it and forward the information you are requesting on to you.
Todd

Todd,
I am reviewing some of John's old spill reports (actually this one pre-dates John) and was hoping that you could help, even if it pre-dates you (and Noble).

I don't see any follow up documentation about the spill on the flowline. However there is an inspection report #200256985, dated 6/22/2010 in response to a complaint from Weld County Environmental office indicating that no obvious problems were noted at the injection well.

I'd appreciate any help in identifying response to this spill, analytical data etc. so we can evaluate this for closure.

Thanks for your help.
