Steve,

As discussed on the phone yesterday, you have approval to proceed per your temporary abandonment (TA) plan shown below. Please submit a "Preliminary" Form 5 showing the current wellbore configuration, including TA plugs, per Rule 308A for a planned suspension of operations of more than 30 days. Attach surface casing cement tickets and TA plug tickets to your submittal. The Form 5 and attachments should be submitted to COGCC's Denver office (hard copy or eForm) for routine processing within 30 days after completion of the TA.

Thanks,

David D. Andrews, P.E., P.G.

Subject: Moore State 2-36 plugs

David,

This is to confirm our phone conversation regarding the plugs in the Moore State 2-36. Bottom plug is 80 ft, short of 100 ft plan and is above the top of the Niobrara at approx 7920-8000. Plan is to set 50 sx inside surface casing and move rig off. We will return next year to complete this well.

Steve
