COGCC Comments

Comment	User	Date
complainant called and said there was excessive noise, and some tracking of mud on the road. I went to the location and found that there was indeed some mud on the road that appeared to come from the location. It was a small amount, but still it was on the county road. There was a boulder county representative sitting in his pickup and when I talked to him, i found out that he was there from a complaint also. He said that he was in charge of the permitting overweight loads on county road one and if Encana did not clean up the small amount of mud, he would not grant a permit. I explained that I was from the COGCC and that I would get it taken care of. I contacted Encana, and they said they would send out a sweeper to remedy the problem. I then drove to the wellsite and found that the transfer of reserve mud to the mud tanks had created a small muddy area where the tires from the transports loading the mud to the reserve tanks could pick it up and carry it to the road on their tires. I noticed that there was no tracking pad, so I talked to the encana representative on location and told him to put in a tracking pad or provide a mechanism to clean the trucks on site. He called his boss and was told to do what ever was necessary to control the mud issue. It was late in the day and the wind was again blowing from the northwest. I was unable to detect any road damage on county one north or south of the access road. I also did not detect any excess noise, but was unable to take a noise reading. I talked to a vender leaving the location that said he would be taking noise readings for eencana and asked him to see if he could send the COGCC a copy of his readings.	precupj	02/08/2012
