Sarah, please refer to Ashley's email below regarding your question on the above-named well.

Please let me know if you have any questions.

Thank you,

Hi Rebecca,

Based on the 2 dimensions of the map, it appears that these wells cross paths, but they actually are not closer than 150' from each other at any point. The Roy 41-29 reaches its BH lat/long prior to hitting the Niobrara formation where the HZ lateral is passing through. According to my measurement, these wellbores are 177' from each other. The Wardell 40-29 is 211' from the lateral. Since neither of these wells are within 150', I don't think they need to be included in the letter. Please let me know if Sarah needs any additional information. I've attached a screen shot, so she can see the map we are using if it helps.

Thanks!
Ashley C
