Wise DB-18 (125-12075)  
Deterding BB-15 (125-12076)

Loni,

Please add these conditions of approval to the well file for the two wells approved for the in-fill pilot evaluation.

Provide an initial evaluation of the pilot well upon completion

- Conduct pressure build up test at the four other wells in the quarter section (offsetting wells) utilizing an automated fluid level sounder prior to completion of the pilot well
- Measure reservoir pressure of the pilot test well
- Conduct pressure build up tests at all wells monthly

Provide an annual summary and evaluation of production and pressure measurements for all the wells in the quarter section.

- Charts comparing semi-log rate versus cumulative production
- Decline curve (monthly production versus time)
- Description of methods
- Conclusions

At the end of three years discuss the results of the program with COGCC staff.

Send all reports on the anniversary of completion to the attention of the Engineering Manager, COGCC
