Denver, Colorado 80203

Overland Resources LLC is currently drilling the permitted well, Handke #3, API 05-001-09744, and is seeking approval to relocate only the surface location of the permitted well, Handke #4, API 05-001-09745, to a surface location 20' south of the Handke #3 surface location as shown on the accompanying documentation. The Handke #4 bottom-hole location remains as permitted. Overland Resources LLC is seeking exigent circumstances under condition (2) found in the COGCC Rules 303.I.

The change is the result of updated geologic interpretation suggesting the Handke #4 should be drilled first and prior to the Handke #2. Currently the Handke #2 and Handke #4 are co-located on a single pad at the surface. Significant economic hardship will occur to the detriment of Overland Resources LLC if the contract driller is unable to skid the rig to the proposed Handke #4 new surface location at the completion of the Handke #3 drilling in the next 3-5 days.

The sharing of the Handke #3 well pad location with the Handke #4 will significantly reduce interim and final surface disturbance and requirements for the Handke #4. The sharing of Handke #3 well access with the Handke #4 will eliminate approximately 1/4 mile of new access road and reduce the surface disturbance from 2 pads to one. Thank you for your consideration.

Sincerely,  
-Gregory
