Drilling/Completion Operations	<p>East Cheyenne Gas Storage Best Management Practices & Procedures East Cheyenne Gas Storage, LLC will utilize the following "Best Management Practices" (BMP) where appropriate to prevent or reduce the impacts caused by gas and oil operations.</p> <p>1) When building new well sites, limit the surface area to be disturbed to that which is required. When a new well is drilled and put on production, reclaim the unneeded well pad area to reduce the disturbed surface area and allow the landowners to use it for agriculture.</p> <p>2) When a previously plugged well is re-entered to re-plug all abandoned production zones, abandoned well in such a manner so as to minimize any surface disturbance. No dry hole marker monument is to be used and well location is to be restored to previous grade.</p> <p>3) Return the land surface to pre-used condition by reforming the surface to match the surrounding area including: terracing, drainage replacement, drainage repair, and the re-seeding in a manner that is specified by the land use agreement or surface owner.</p> <p>4) Spray location to control noxious weeds annually.</p> <p>5) Inspect facilities for erosion and install erosion controls where required.</p> <p>6) Utilize existing roads as much as possible and build new roads to minimize land disturbance area.</p> <p>7) Fill drill site pits within 120 days after completion of well and subject to pit fluid levels, pit moisture, and weather.</p> <p>8) Hydrocarbon storage tanks are to be surrounded by impermeable berms to prevent spills from escaping off-site.</p> <p>9) Open top tanks and unattended pits that may contain hydrocarbons will be fenced and coved with nets to protect fowl and animals.</p> <p>10) Procedural plans are in place to prevent, control and cleanup hydrocarbon spills.</p>
