COGCC Comments

Comment	User	Date
All condensate that was previously on tanks and stairway has been removed and cleaned up. There are new dump valves on the horizontal separator and there is a larger rebuilt emissions control device on the battery site. It appears to be working and shows 6 oz pressure on the guage. The well at the time of inspection was not cycling and showed no procuction for the 3rd or the 4th of June. Flow Line pressure was in excess of 1100 PSI. The produced water tank was about half full and did not register on the remote sensor. The battery looked to be functioning correctly.	precupj	06/04/2012
