David,

I'm writing in response to your e-mail of 5/15/12 regarding having Encana conduct observations on the eastern and western drainages of the PC-28 pad to look for daylighted drilling mud from operations on the Gardner 28-1C. Charles Jensen and myself conducted a site reconnaissance for the drainages on either side of the PC-28 on 5/16/12 which covered a relief of ~500' in elevation from the base of the pad. Conditions within the drainages at the time of the visit were dry with no evidence of drilling mud observed.

Please feel free to contact me with any questions at one of the numbers below.

Thanks,

Dan
