Hello Arthur,

Please add the following text to the comment section in regards to water wells on the Form 2A document #400298465:

There are no water wells located in Section 30. The nearest water well with depth information is in Section 29, 7,447' feet away with an elevation of 5,105'. Depth to water in this well is listed as 6'. (receipt # 0019439) There is another water well is in the NWNW of Section 19, 5,851 feet away, with an elevation of 5197', however, there is no data provided to determine depth of water well. (receipt #0390800A) We listed the 6' as the depth to ground water due to the information in the nearest water well. However, the elevation of our proposed well is 5,143' several feet higher than the water well at an elevation being 5,105' and being 7,447' feet away. That being the case, I don't believe that 6' is a true representation of the depth to water at our proposed location. Due to elevation, depth to water well would be estimated at 38' at proposed location.

Thank you Arthur!

Happy Friday!
