**Subject:** RE: CBL deferment on the Jolley KP 344-8 045-21209

Angela:

WPX can delay the CBL on this well.

I would like to suggest something I know WPX does anyway – I interpret the TOC from the temp-log to possibly be closer to the TOG than the depth provided, below. Monitor the bradenhead pressure with extra vigilance!

Regards,

Jay Krabacher

**Subject:** CBL deferment on the Jolley KP 344-8

Kevin, Dave, & Jay:

WPX Energy Rocky Mountain, LLC is requesting a CBL deferment on the Jolley KP 344-8 located in the NWNW Section 16, T6S-R91W. Attached is a temperature survey that was performed after cementing the 4 ½" production casing on the subject well.

Information pertaining to the request is as follows:

Well:	Jolley KP 344-8
API:	05-045-21209-00
Location:	Section 16 T6S-R91W
Surface Csg:	9 5/8" set and cemented at 1456'
Production Csg Cement Date:	4 ½" @ 7780' – cemented 09/13/12
Cement:	1155 sks
Cement top from survey:	4000' Estimated
Estimated top of gas:	4825'
Temp Survey:	Attached
Volume to fill annular:	Hole remained full following cementing operations

Please let me know if you need additional information to approve this deferment. After deferment is received, Williams will continue to monitor the bradenhead pressure until the CBL has been performed and notify if pressure exceeds 150 psig.
