Nearest surface water 450' SW is a drainage that was dry at time of observation. Nearest water well 1833' S is an irrigation well; Receipt #3648257B, Permit #284726 with a depth of 140' and an unknown static water level. Water well Permit #9611 used for static water level. The reference area is on undisturbed ground immediately adjacent to and West of the pad location as shown in the location photo facing West. This location is an amendment of the Igo Creek 17-23H (05-123-33057). The surface location is different, so I did not amend location 421780 (Doc #400125520); abandon location sundry forthcoming for both the permitted well and location. Location is a single-well pad with the production facilities on/off of the pad. No existing equipment.

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct and complete.

BMP

<u>Type</u>	<u>Comment</u>
Pre-Construction	Operator will participate in the Colorado Oil & Gas Association Voluntary Baseline Groundwater Quality Sampling Program.
Storm Water/Erosion Control	Stormwater management plans (SWMP) are in place to address construction, drilling and operations associated with Oil & Gas development throughout the state of Colorado in accordance with Colorado Department of Public Health and Environment (CDPHE) General Permit No. COR- 038637. BMP's will be constructed around the perimeter of the site prior to, or at the beginning of construction. BMP's used will vary according to the location, and will remain in place until the pad reaches final reclamation.
General Housekeeping	Housekeeping will consist of neat and orderly storage of materials and fluids. Wastes will be temporarily stored in sealed containers and regularly collected and disposed of at offsite, suitable facilities. If spills occur prompt cleanup is required to minimize any commingling of waste materials with stormwater runoff. Routine maintenance will be limited to fueling and lubrication of equipment. Drip pans will be used during routine fueling and maintenance to contain spills or leaks. Any waste product from maintenance will be containerized and transported offsite for disposal or recycling. There will be no major equipment overhauls conducted onsite. Equipment will be transported offsite for major overhauls. Cleanup of trash and discarded materials will be conducted at the end of each work day. Cleanup will consist of patrolling the roadway, access areas, and other work areas to pickup trash, scrap debris, other discarded materials, and any contaminated soil. These materials will be disposed of properly.
Material Handling and Spill Prevention	Spill Prevention Control and Countermeasures (SPCC) plans are in place to address any possible spill associated with Oil & Gas operations throughout the state of Colorado in accordance with CFR 112.
