

## PLANNING BMP's

- \* Share/consolidate corridors for pipeline ROWs to the maximum extent possible.
- \* Maximize the utility of surface facilities by developing multiple wells from a single pad (directional drilling), and by co-locating multipurpose facilities (for example, well pads and compressors) to avoid unnecessary habitat fragmentation and disturbance of additional geographic areas.
- \* Where possible, consolidate pipeline and existing roadways, or roadways that are planned for development.
- \* Maximize use of remote telemetry for well monitoring to minimize traffic

## PRODUCTION/RECLAMATION BMP's

- \* Use only certified weed-free native seed in seed mixes, except for non-native plants that benefit wildlife
- \* WPX Energy will use certified, weed free grass hay, straw, hay or other mulch materials used for the reseeding and reclamation of disturbed areas.
- \* Install exclusionary devices to prevent bird and other wildlife access to equipment stacks, vents and openings.
- \* Reduce visits to well-sites through remote monitoring (i.e. SCADA) and the use of multi-function contractors.
