Flessner 1-A ~ SWNE Sec 30 T1S R56W ~ API#05-121-09201 ~ Rem #7554

The COGCC received the pit soil sampling report prepared by A.G. Wassenaar, Inc. for the above referenced facility, and concurs with the conclusions therein. Great Western may proceed with back filling and reclaiming the pit.

The remediation number has been closed (Document #200377220) for this project involving both the removal of the oily soils from the location and the pit closure activities. However, should conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards, or if ground water is found to be impacted, further investigation and/or remediation activities may be required at the site. If re-vegetation is not sufficient to meet COGCC rules, remediation of soils with pH/arsenic exceeding Table 910-1 standards may will be required.

Thank you,

Ann Clements Eckman, P.G. *for*

John,

Attached is the sample report for the Flessner pit that we previously discussed. The sample was taken by Joe Pieterick with A. G. Wassenaar, Inc.

Please let me know what the next step is to move forward and close the pit.

Thank You,

TIM MUSGRAVE

Tim,

Sounds good. Thank you for following up on the pit closure.

John

John,

I spoke with Tom Rand and we have decided to move forward and just close that pit. I had samples pulled from the pit today and they are headed to the lab to be tested. As soon as I get those results I will forward them to you and wait for your approval before moving forward. Thanks for your help.
