### 15. Comments:

This is a refiling of a previous permit which was issued API # 05-067-09560. This well will be located on an existing well pad. Depth to ground water varies in this area and no specific information is available for this tract because there are no water wells on fee lands within 1/2 mile. Colorado Division of Water Resources Aquamap shows depths of water wells in the general area to be between 170 -255 feet in depth.

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct and complete.

| Construction | <p>The IGE 118 well location will be expanding to the North and West of the existing Ute T #2 well into a relatively flat, non-irrigated field. Very little vegetation will be removed. Dirt from the excavation of the reserve pit will be stockpiled until interim reclamation.</p> <p>Straw wattles will be placed around the perimeter of the well pad during construction operations where appropriate to control runoff and prevent sediment from flowing beyond the perimeter of the previously disturbed area.</p> <p>All equipment will be painted with a uniform, non-reflective paint that is darker than the adjacent landscape.</p> <p>Any disturbed area that is outside the permanent well pad will reseeded with a weed-free seed mixture consistent with the surrounding area. Re-seeding will be done via drill seeding in flat areas and broadcast seeding on slopes. Reseeding will be done in spring or summer. Elm Ridge will control all noxious weeds as identified by the La Plata County weed technician. Elm Ridge will monitor the site after reclamation and spray for weeds where necessary. Methods of control will be pursuant to recommendations from the LaPlata County weed control technician.</p> |
