Construction	<p>Operator has designed the well pad with insloping and a storm water control ditch to prevent storm water run-off/run-on and the release of fluids for the location. See attached construction layout drawing.</p> <p>The location will be fenced and the fenced area will include the above ground Fresh Water Storage containment.</p>
Drilling/Completion Operations	<p>Operator will ensure 110 percent secondary containment for any volume of fluids contained at the well site during drilling and completion. Operator will implement best management practices to contain any unintentional release of fluids.</p> <p>Fresh Water for the Fresh water Storage containment comes from a water provider, water sources permitted for consumable industrial use.</p>
