**RE: Soil Confirmation Sampling Report  
DC-11 Well Location  
Dolores County, Colorado**

Dear Mr. Gibbons:

On March 14, 2013, Animas Environmental Services, LLC (AES) completed soil confirmation sampling at the Kinder Morgan CO<sub>2</sub> LP (KM) DC-11 well, located in Dolores County, Colorado.

---

## 1.0 Site Information

### 1.1 *Location*

Location – NW $\frac{1}{4}$  SE $\frac{1}{4}$ , Section 15, T40N, R18W, Dolores County, Colorado  
Well Head Latitude/Longitude – N37.73262 and W108.83427, respectively  
Land Jurisdiction – Private

Figure 1. Topographic Site Location Map

Figure 2. Aerial Site Map and Sample Locations, March 2013

---

## 2.0 Soil Action Levels

Action levels for releases are outlined within the Colorado Oil and Gas Conservation Commission (COGCC) Rules 900 Series Exploration and Production (E&P) Waste Management. These rules are applicable only to E&P waste, as defined in §34-60-103(4.5), Colorado Revised Statutes (C.R.S.). As prescribed within the 900 Series, parameters for collected soil samples were analyzed per COGCC Table 910-1 (May 2011). Note that effective November 28, 2012, the Colorado Division of Public Health and the Environment (CDPHE) adopted U.S. Environmental Protection Agency's (USEPA) Regional Screening Levels (RSLs) for residential and industrial exposure scenarios.

---

### 3.0 Soil Sampling

AES was initially contacted by Grant Gibbons, KM representative, on March 11, 2013, and on March 14, 2013, Heather Woods and Deborah Watson of AES completed the confirmation soil sampling field work. Sampling activities included collection of 14 discrete soil samples. Soil samples DC-11 C-1 through C-12 were collected within a 60 ft by 40 ft area within the location of a former sediment stockpile. Samples were collected on a 20 ft grid within this area. Sample DC-11 C-13 was collected within an area of former stained soils located along the western edge of the well location. In addition, a single background sample (DC-11 Background) was collected offsite and upgradient of the location.

The area was subdivided into 20 ft sections using a RT-314 Roll Tape. Sample locations were identified on the ground surface prior to sampling. Samples were collected with a combination of clean stainless steel spoons, shovels, and augers from depths between 0.2 ft and 0.5 ft below ground surface (bgs). Between samples, the sampling tools were decontaminated using a wash mixture of Alconox and water, and were rinsed three times with distilled water.

Latitude and longitude of each sample location was recorded in the field with a Garmin Etrex 20 Global Positioning System (GPS). Soils were observed to consist primarily of tan to brown lean clay to clayey sand (C-1 through C-13). The DC-11 Background sample consisted of brown, clayey sand. All soil samples collected during the sampling activities were submitted for laboratory analysis.

#### 3.1 Laboratory Analyses

The soil samples collected for laboratory analysis were placed into new, clean, laboratory-supplied containers, which were then labeled, placed on ice, and logged onto a sample chain of custody record. Samples were maintained on ice until delivery to the analytical laboratory, Hall Environmental Analysis Laboratory (Hall) in Albuquerque, New Mexico. The soil sample was laboratory analyzed per COGCC Table 910-1 requirements, which included the following:

- Volatile Organic Compounds (VOCs) per U.S. Environmental Protection Agency (USEPA) Methods 8015/8021: *total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and total xylenes (BTEX)*;
- Polynuclear Aromatic Hydrocarbons (PAHs) per USEPA Method 8270C: *acenaphthene, anthracene, benzo(A)anthracene, benzo(B)fluoranthene, benzo(K)fluoranthene, benzo(A)pyrene, chrysene, dibenzo(A,H)anthracene, fluoranthene, fluorine, indeno(1,2,3,C,D)pyrene, naphthalene, and pyrene*;

- Inorganics: *electrical conductivity, sodium adsorption ratio (SAR), and pH*; and
- Metals per USEPA Method 6010B and 7471: *arsenic, barium, cadmium, chromium (III), chromium (VI), copper, lead, mercury, nickel, selenium, silver, and zinc*.

### 3.3 Laboratory Analytical Results

Laboratory analytical results reported **above** detection limits are as follows:

VOCs:

- Toluene: C-1 (0.0072 mg/kg).

Inorganics:

- Electrical Conductivity ranged from 0.41 mmhos/cm in DC-11 Background to 0.89 mmhos/cm in C-5 and C-7;
- SAR ranged from 0.090 in DC-11 Background sample up to 5.3 in C-1; and
- pH was reported from 7.7 (DC-11 Background) up to 8.5 (C-5).

Metals:

- Arsenic: Three samples had reported arsenic concentrations above laboratory detection limits of 1.3 mg/kg and 3.1 mg/kg, including C-7 (1.9 mg/kg), C-12 (1.5 mg/kg), and DC-11 Background (3.8 mg/kg);
- Barium: All samples had reported concentrations above laboratory detection limits and ranged from 130 mg/kg (DC-11 Background) up to 370 mg/kg (C-9);
- Cadmium: Two samples had reported cadmium concentrations above laboratory detection limits, including C-5 (0.095 mg/kg) and C-9 (0.076 mg/kg);
- Chromium (III): All samples had reported concentrations above laboratory detection limits, and concentrations ranged from 4.1 mg/kg (C-1) up to 12 mg/kg (C-2, C-3, C-4, and C-11);
- Copper: All samples had reported concentrations above laboratory detection limits and ranged from 3.4 mg/kg (C-7) up to 9.2 mg/kg (C-5);
- Lead: Concentrations were reported above laboratory detection limits in all samples and concentrations ranged from 1.2 mg/kg (C-7) up to 11 mg/kg (C-5);
- Mercury: All samples had reported concentrations above laboratory detection limits and ranged from 0.0078 mg/kg (DC-11 Background) up to 0.026 mg/kg (C-5 and C-9);
- Nickel: All samples had reported concentrations above laboratory detection limits, and concentrations ranged from 5.4 mg/kg (C-7) up to 13.0 mg/kg (C-5);
- Zinc: All samples had reported concentrations above laboratory detection limits. Concentrations of zinc ranged from 16 mg/kg (C-7) up to 43 mg/kg (C-5).

Results are presented in Tables 1 through 4, and the laboratory analytical report is attached.

---

## 4.0 Conclusions

On March 14, 2013, AES conducted confirmation soil sampling at the KM DC-11 well, located in Dolores County, Colorado. Soil sampling consisted of collection of 14 discrete soil samples from depths between 0.2 to 0.5 feet bgs. Onsite samples (DC-11 C-1 through C-13) were collected at predetermined locations at the well location. A single background sample was collected offsite (DC-11 Background).

Concentrations of BTEX, TPH, PAHs, barium, cadmium, chromium (III and VI), copper, lead, mercury, nickel, selenium, silver, zinc, electrical conductivity, SAR, and pH were reported **below** applicable COGCC standards.

Arsenic concentrations exceeded the COGCC residential standard of 0.39 mg/kg in three samples and exceeded the industrial standard of 1.6 mg/kg in two samples. The highest arsenic concentration was reported in DC-11 Background with 3.8 mg/kg. Note that arsenic laboratory detection limits (1.3 mg/kg, 3.1 mg/kg, and 6.3 mg/kg) were reported above the COGCC residential standard of 0.39 mg/kg. Previous work experience in the general area of this location and throughout Colorado suggest that elevated and widely varying background arsenic concentrations (greater than 0.39 mg/kg) occur naturally due to weathering and erosion of bedrock and soil.

If you have any questions about this report or site conditions, please do not hesitate to contact Deborah Watson at (505) 564-2281.

Sincerely,

Landrea Cupps  
Environmental Scientist

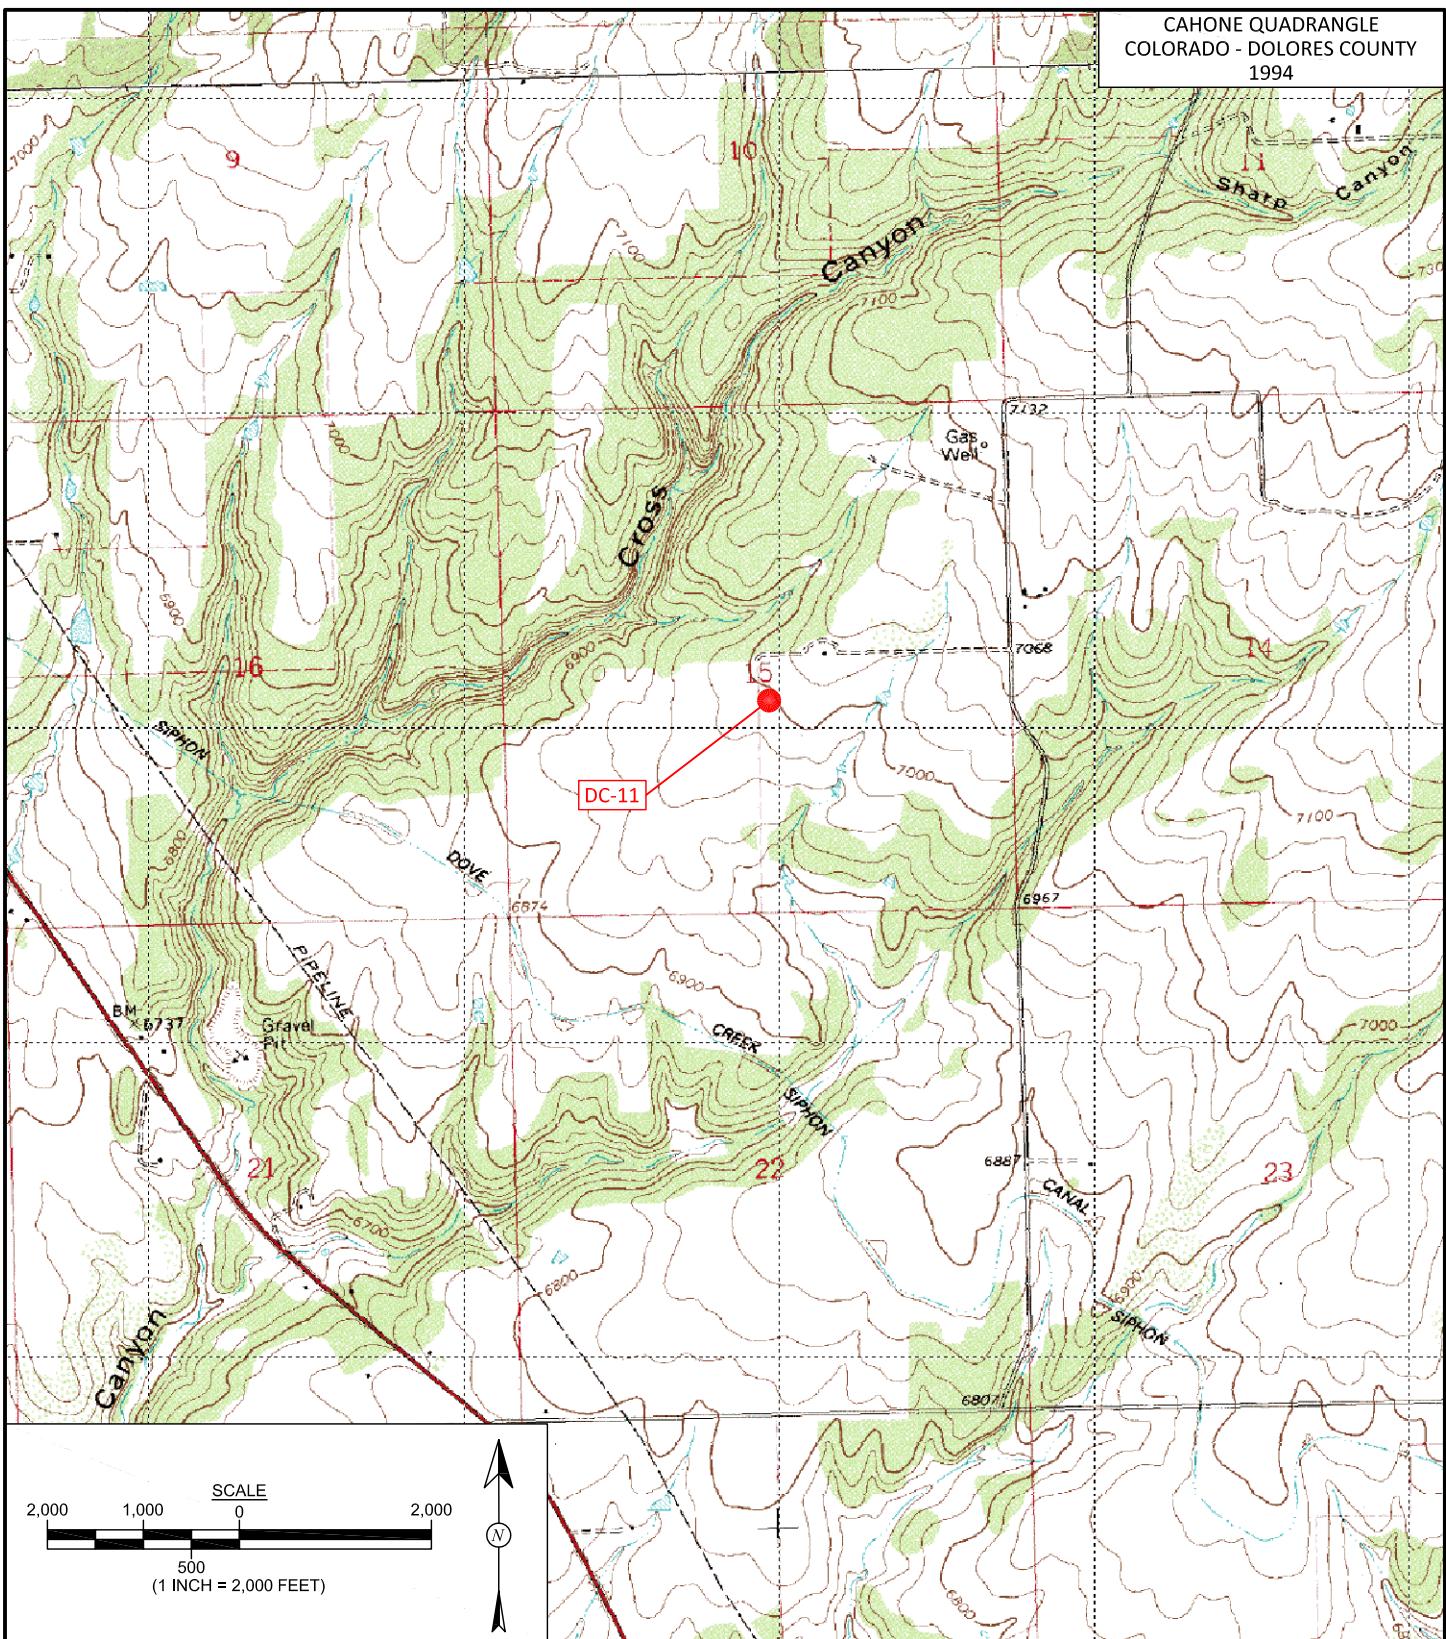

Elizabeth McNally, PE

RE: K.M. DC-11

OrderNo.: 1303601

Dear Debbie Watson:

Hall Environmental Analysis Laboratory received 14 sample(s) on 3/15/2013 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to [www.hallenvironmental.com](http://www.hallenvironmental.com) or the state specific web sites. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. All samples are reported as received unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

A handwritten signature in black ink, appearing to read "Andy Freeman".

### Chain of Custody

1. Were seals intact? Yes  No  Not Present
2. Is Chain of Custody complete? Yes  No  Not Present
3. How was the sample delivered? Courier

### Log In

4. Coolers are present? (see 19. for cooler specific information) Yes  No  NA
5. Was an attempt made to cool the samples? Yes  No  NA
6. Were all samples received at a temperature of >0° C to 6.0°C Yes  No  NA
7. Sample(s) in proper container(s)? Yes  No
8. Sufficient sample volume for indicated test(s)? Yes  No
9. Are samples (except VOA and ONG) properly preserved? Yes  No
10. Was preservative added to bottles? Yes  No  NA
11. VOA vials have zero headspace? Yes  No  No VOA Vials
12. Were any sample containers received broken? Yes  No
13. Does paperwork match bottle labels?  
(Note discrepancies on chain of custody) Yes  No
14. Are matrices correctly identified on Chain of Custody? Yes  No
15. Is it clear what analyses were requested? Yes  No
16. Were all holding times able to be met?  
(If no, notify customer for authorization.) Yes  No

# of preserved bottles checked for pH:  
<2 or >12 unless noted)

Adjusted? \_\_\_\_\_

Checked by: \_\_\_\_\_

### Special Handling (if applicable)

17. Was client notified of all discrepancies with this order? Yes  No  NA
