Greg et al:

After review of the attachment for the spray on liner and their method of application to the concrete tank and concrete tank ring wall, it appears that Encana will provide a sealed surface with the spray on liner, under and around the tanks.

Steve

Jason provided the response below prior to me sending him the e-mail we discussed this morning.

Alex, please take a look at the language he proposed for the Financial Assurance.

Steve, please take a look at the attachment with respect to liner installation.

Thanks,

Greg-

Per our conversation yesterday, my responses are listed below:

1. **Proposed COA 2A281** - Within 30 calendar days of conclusion of the initial grading and earthwork in Phase I and after the conclusion of Phase IV, operator shall submit as-built drawings, including plan view and cross-sections (with perpendicular axes), prepared and stamped by a Professional Land Surveyor or Professional Engineer and including the tank pad and access road.

2. **Proposed COA 2A2810** - In order to comply with Rules 704 and 908.11.g.(1)B, Hunter Ridge Energy Services LLC is prepared to provide financial assurance to the COGCC in the amount of \$3MM prior to commencing construction operations. If the COGCC decides additional assurance is needed upon review and approval of the Form 28, Hunter Ridge Energy Services LLC will secure the additional amount when that determination is made.

3. **Spray on Liner Application** – See attached. Encana used the same spray on application at the Canyon Creek NWSE (Location # 415299) in the Wattenberg Field.

Please let me know if you need any additional information.

Jason
