Engineer	Evaluated offset wells for adequate cement coverage.	4/23/2013 9:21:41 AM
Permit	- Operator concurred that TPZ is 743 FSL. - Two leases make up the 320 acres. Corrected lease description from W/2 to NW/4 and SW/4. - Nearest well is Badding 38-26 - Changed distance to nearest lease line to 0 - Horizontal wellbore crosses lease lines within drilling and spacing unit; distance to lease line is 0'; distance to unit boundary is 460'. Ready to pass pending public comment.	4/18/2013 2:01:43 PM
Permit	- My calc for TPZ at 7999' MD is 743 FSL. - Is the lease all one 320 acre lease? On the lease drawing, it looks like 2 separate leases. - Requested name of well used for nearest well.	4/18/2013 1:05:58 PM

Drilling/Completion Operations	Encana will comply with the "COGCC Policy for Bradenhead Monitoring During Hydraulic Fracturing Treatments in the Greater Wattenberg Area", dated May 29, 2012.
Drilling/Completion Operations	Prior to drilling operations, Operator will perform an anti-collision scan of existing offset wells that have the potential of being within close proximity of the proposed well. This anti-collision scan will include definitive MWD or gyro surveys of the offset wells with included error of uncertainty per survey instrument, and compared against the proposed well path with its respective error of uncertainty. If current surveys do not exist for the offset wells, Operator may have gyro surveys conducted to verify bottomhole location. The proposed well will only be drilled if the anti-collision scan results indicate that there is not a risk for collision, or harm to people or the environment. For the proposed well, upon conclusion of drilling operations, an as-constructed gyro survey will be submitted to COGCC with the Form 5.
