DRILLING PLANS AND PROCEDURES

27. Is H2S anticipated? Yes No If Yes, attach contingency plan.

28. Will salt sections be encountered during drilling? Yes No

29. Will salt (>15,000 ppm TDS CL) or oil based muds be used during drilling? Yes No

30. If questions 28 or 29 are yes, is this location in a sensitive area (Rule 901.e)? Yes No

31. Mud disposal: Offsite Onsite

If 28, 29, or 30 are "Yes" a pit permit may be required.

Method: Land Farming Land Spreading Disposal Facility Other: _____

Note: The use of an earthen pit for Recompletion fluids requires a pit permit (Rule 905b). If air/gas drilling, notify local fire officials.

33. Comments No conductor casing will be used./Unit Configuration NBRR: Sec. 19:E/2W/2, W/2E/2; Sec. 18:SE/4SW/4, SW/4SE/4/Unplanned Sidetrack/Verbal Approval: Granted by Diana Burn (COGCC) at 3:58pm 05/28/2013/While drilling the lateral hole interval at a depth of 12,127' tight hole conditions were experienced and the decision was made to trip out of the hole. A reaming BHA was picked up and run in hole to improve hole conditions prior to running the production liner. During the reaming operations tight hole was experienced at 10,760', working the drill string it was determined that the borehole had collapsed. A review of the seismic and LWD data indicated this was where the wellbore had crossed a 113' fault and come within 10' of the Sharon Springs formation. A second attempt to clean the hole was made with a motor and bit but was found to be unsuccessful resulting in erratic torque and drilling parameters posing a risk of sticking the BHA downhole. The decision was made to perform an open hole sidetrack to re-drill the remaining 1,750' of lateral. The depth providing the highest likelihood of success for the side track was located at 9,645'MD, 7,204' TVD. The plan forward will be sidetrack below the current wellbore to cross the fault in more competent rock and re-drill the additional 1,750' in the Niobrara B/C bench.
