### 14. Water Resources:

Rule 901.e. may require a sensitive area determination be performed. If this determination is performed the data is to be submitted with the Form 2A.

Is this a sensitive area: ☐ No ☒ Yes Was a Rule 901.e. Sensitive Areas Determination performed: ☒ No ☐ Yes

Distance (in feet) to nearest surface water: 175, water well: 965, depth to ground water: 24

Is the location in a riparian area: ☒ No ☐ Yes Was an Army Corps of Engineers Section 404 permit filed ☒ No ☐ Yes

Is the location within a Rule 317B Surface Water Supply Area buffer zone:

☒ No ☐ 0-300 ft. zone ☐ 301-500 ft. zone ☐ 501-2640 ft. zone

If the location is within a Rule 317B Surface Water Supply Area buffer have all public water supply systems within 15 miles been notified: ☐ No ☐ Yes

### 15. Comments:

Distance to nearest railroad is greater than one mile. Nearest surface water 175' NE is Box Elder Creek. It was dry upon field observation and will not be disturbed. Location is sensitive due to distance to Box Elder Creek and proximity to domestic well. Nearest water well 965' W is a domestic well; Receipt #0486319, Permit #238708 with an unknown depth and static water level. Water well Permit #44177 used for static water level. Location is a three-well pad consisting of the proposed Marie D04-72-1HN, Marie D04-73-1HN, & Marie D04-74-1HN; multi-well plan attached. Equipment for the proposed wells will be added to existing facilities for the Gittlein D04-24 (API: 05-123-30082) within the pad disturbance. Existing equipment: 1 separator, 1 VOC Combustor, 1 oil tank, 1 gas pipeline, 1 3-phase flowline, 1 EFM, & 1 water vault. Totals with proposed equipment listed in 3.1.

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct and complete.

| General Housekeeping                   | Housekeeping will consist of neat and orderly storage of materials and fluids. Wastes will be temporarily stored in sealed containers and regularly collected and disposed of at offsite, suitable facilities. If spills occur prompt cleanup is required to minimize any commingling of waste materials with stormwater runoff. Routine maintenance will be limited to fueling and lubrication of equipment. Drip pans will be used during routine fueling and maintenance to contain spills or leaks. Any waste product from maintenance will be containerized and transported offsite for disposal or recycling. There will be no major equipment overhauls conducted onsite. Equipment will be transported offsite for major overhauls. Cleanup of trash and discarded materials will be conducted at the end of each work day. Cleanup will consist of patrolling the roadway, access areas, and other work areas to pickup trash, scrap debris, other discarded materials, and any contaminated soil. These materials will be disposed of properly. |
| Material Handling and Spill Prevention | Spill Prevention Control and Countermeasures (SPCC) plans are in place to address any possible spill associated with Oil & Gas operations throughout the state of Colorado in accordance with CFR 112.  |
| Storm Water/Erosion Control            | Stormwater management plans (SWMP) are in place to address construction, drilling and operations associated with Oil & Gas development throughout the state of Colorado in accordance with Colorado Department of Public Health and Environment (CDPHE) General Permit No. COR- 038637. BMP's will be constructed around the perimeter of the site prior to, or at the beginning of construction. BMP's used will vary according to the location, and will remain in place until the pad reaches final reclamation.   |
