

Reclamation Procedure for Final Abandonment

This well has been plugged and equipment removed from the location. Any available top soil will be stripped and stockpiled to be spread after the area has been re-contoured to blend with the adjacent terrain. Any unnecessary portion of the access road and the location will be ripped in preparation for seeding.

The location and access road will have certified weed free straw crimped on all areas of disturbance and be reseeded with the attached BLM seed mixture. The location will be inspected for erosion and the presence of weeds in the following years. Weed control will be continued until release.
