CASE NARRATIVE

Client: Colorado Oil&Gas Conservation Commission

Project: Adels Water Well #200383515

Report Number: 280-44808-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

One sample and a Trip Blank were received on 07/26/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 5.0 degrees Celsius.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples Adels WW (280-44808-1) and Trip Blank (280-44808-2) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B.

No difficulties were encountered during the volatiles analyses.

All quality control parameters were within the acceptance limits.

GAS RANGE ORGANICS

Sample Adels WW (280-44808-1) was analyzed for gas range organics in accordance with EPA SW-846 Method 8015B - GRO.

The percent recovery for surrogate a,a,a-Trifluorotoluene failed the surrogate recovery criteria high in the Matrix Spike sample associated with batch 184816. Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed. Spike recoveries were in control and the associated LCS and LSD were in control and provide evidence that operating procedures were in control.

No other difficulties were encountered during the GRO analysis.

All other quality control parameters were within the acceptance limits.

DISSOLVED GASES

Sample Adels WW (280-44808-1) was analyzed for dissolved gases in accordance with RSK_175.

No difficulties were encountered during the dissolved gases analysis.

All quality control parameters were within the acceptance limits.

Sample Adels WW (280-44808-1) was analyzed for Diesel Range Organics in accordance with EPA SW-846 Method 8015B - DRO.

Matrix spike samples were not requested and they were not performed due to insufficient sample volume. The associated LCS and LCSD were in control and provide evidence that operating procedures were in control. No further action was required.

No other anomalies were observed. All quality control parameters were within the acceptance limits.

DISSOLVED METALS

Sample Adels WW (280-44808-1) was analyzed for dissolved metals in accordance with EPA SW-846 Method 6010B.

The MS and MSD spike recoveries for Boron and Manganese failed the recovery criteria low in batch 280-185154. This MS/MSD batch was performed on a sample from another client and/or job. All spike recoveries were in control. The associated LCS was in control and provides evidence that operating procedures were in control. No further action was required.

No other difficulties were encountered during the dissolved metals analysis.

All other quality control parameters were within the acceptance limits.

TOTAL METALS

Sample Adels WW (280-44808-1) was analyzed for total metals in accordance with EPA SW-846 Method 6010B.

Several spike recoveries were outside control limits in the MS and MSD associated with batch 280-185155. This MS/MSD batch was performed on a sample from another client and/or job. The associated LCS was in control and provides evidence that operating procedures were in control. No further action was required.

No other difficulties were encountered during the metals analysis.

All other quality control parameters were within the acceptance limits.

GENERAL CHEMISTRY - VARIOUS METHODS

Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.
