Rusty,

I looked through the files for Remediation Project 3797. We need a confirmation sample from the surface soil across CR72 from the tank battery where a previous sample contained a TPH concentration of 5370 mg/kg. Please see the attached figure. A soil sample should be collected and analyzed for TPH to demonstrate current conditions. I stopped by this location yesterday, and based on that inspection and the remediation file, we should be able to close the project if a confirmation sample shows that TPH concentrations have been reduced.

Please contact me with any questions.

Regards,

Rick Allison, P.G.

Rick – we recently identified that we may have an old open remediation project on a well we purchased from Texas American Resources Corporation (TARC). The project stems from a spill at the Indian Tree #1 tank battery in July 2006 (COGCC document 1395662). Per the spill entry in COGIS it looks like the spill and cleanup was closed out on December 3, 2006. However, the associated remediation project #3797 doesn't have a final resolution entry in the Correspondence Log. Can you confirm that everything got taken care of back in 2006? TARC is trying to get a bond released and they have identified this open item as something we, as the buyer of their assets, need to resolve.
