Peter,

As a follow up to our phone conversation yesterday at 2:05pm, we had a spill outside of berm containment on the Fisher 13-9S-55W-01. The spill was discovered on Thursday, September 19th at 4:30pm. I can only estimate the spill volume currently, approximately 50-100 Bbls. No water ways were effected. We began cleanup yesterday, Friday, September 20th at 3pm. The saturated soil has now been completely removed and stored on the drilling pad on a plastic liner. LT environmental is assisting in clean up and post event sampling. We had an on site discussion with the land owner and the county contact, John DeWitt, has been notified (both immediately following our conversation yesterday).

Thanks,  
Bryan Bugg
