David,

As stated in the Conditions of Approval for remediation #6744 (see below), the annual status report for the Jones-Dupree, API # 121-05415 was due no later than 10/31/13. If Saga intends to continue the land treatment, please collect samples and submit a status report by 11/29/13. Please call me if you'd like to discuss sample collection and analysis.

The December 2012 samples had TPH and Benzo(a)pyrene concentrations that greatly exceeded respective Table 910-1 concentrations. If Saga chooses to discontinue treatment, the soil may be properly disposed of at a landfill. Submit disposal documentation and a closure request via a Form 4 Sundry.

*The remediation plan for land treatment of oily waste is approved with the following conditions:*

- *Land treatment shall be performed in strict accordance with COGCCRule 907.e.(2).*
  - *Perform routine maintenance to prevent contamination of stormwater runoff.*
  - *Land treatment shall be documented in an annual status report due each year on October 31st*
  - *Status report shall include the following information:*
    1. *Type and volume of microbes, nutrients or other amendments added.*
    2. *Dates the material was aerated, moisturized, maintained, etc ...*
    3. *Soil sample results for TPH, BTEXand the PAHs listed on Table 910-1. Contact COGCC to agree on sufficient number of samples prior to collection.*
- *Oily waste cannot be beneficially reused until confirmation samples verify compliance with Table 910-1.*
- *Upon approval of final closure, surface shall be restored in accordance with COGCC reclamation rules.*

Please call or email questions or concerns.

Best regards,

John Noto, P.G.
