Joe,

I have reviewed the referenced Form 2A Oil & Gas Location Assessment and have a few comments.

1) Per COGCC Rule 303.b.(3)C, please provide me a description of all oil, gas, and/or water pipelines that will be on this location.

2) A review of your Location Drawing and Hydrology Map indicates the nearest downgradient surface water feature is approximately 220 feet from the proposed oil and gas location.

Therefore I will change that distance in the Water Resources section of the 2A.

3) Based on the estimated depth to groundwater being rather shallow at 12 feet and the proximity of nearby surface water features (220 feet), this proposed oil and gas location is considered a Sensitive Area. Therefore, I will change the Water Resources section to reflect this.

Please respond to this correspondence by March 20, 2014. If you have any questions, please contact me. Thank you.

Hi Doug,

1. One three (3) inch steel flowline from the well to the facility is planned. The line size will be no smaller than three (3) inches but is contingent on the wells flow rate (possible four (4) inch steel line).

2. Ok, just a note, the surface water feature is a man made dam that captures rain water. According to the surface owner (and interest owner for this well) it is dry 80% of the year.

3. Ok

Please get back with me if there are any other questions or concerns.

Joe Mazotti
