This note is intended to go into the well-files for the subject well. Jeff Schneider, who is to conduct the P&A work, called about some 'suspicious' depth numbers on the Form 6 (doc # 1536146). There was some confusion as to the setting depth of a CIBP. The depth of 2850' is apparently a typo, someone (possibly within the COGCC Engineering Dept.) inadvertently juxtaposed the setting depth of 2580' to 2850' (which is deeper than the hole depth!). Mr. Schnieder called about this, and we agreed that 2580' was the intended and correct setting depth.

Furthermore, since the top perf is also at 2580', it would be a good idea to NOT set the CIBP at that same depth, but higher up in the hole.

Regards,

Jay Krabacher
