Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

Produced water was found to have surface along the road going to the Shipianka 11-33 location. Water ran along the roadside towards the location for 300' before running off down the hill for another 120' and coming to a stop on the hillside. The spill was isolated upon discovery. Crews are on location today to dig up and repair the line. Initial word from the field is that the leak was likely from a failure at the relief valve.
