Kate,

I have reviewed the referenced Form 2A Oil and Gas Location Assessment and have the following comments.

- 1) Per COGCC Rule 303.b.(3)C, a description of all oil, gas, and/or water pipelines must be included on the Form 2A. Please provide me that description. It can be as simple as the number, size, and material of each pipeline, buried or above ground, pressurized or not.
- 2) In the Construction section you have indicated that interim reclamation is estimated to begin six months after construction commences at this oil and gas location. This is not in compliance with COGCC Rule 1003.b. This oil and gas location is on CRP Cropland. Interim reclamation shall occur no later than three months after drilling operations on Cropland. Please provide me with a revised date that interim reclamation will begin.
- 3) In the Water Resources section, you have indicated the estimated depth to groundwater at this oil and gas location is 118 feet based on water well Permit #28461. A review of this water well permit indicates 118 feet is the total depth of that water well and its static water level is 28 feet. Therefore, I will change the estimated depth to groundwater to reflect this.

Please respond to this correspondence by July 17, 2014. If you have any questions, please feel free to contact me. Thank you.

Doug,

Thank you for the feedback. Please see our responses to your comments below.

1) There have been no changes to the location.

I certify that there have been no changes on land use, lease description.

The pad has not been built.

No pit will be used.

There will be no additional surface disturbance.

The location does not require a variance from any of the rules listed in Rule 306.d.(1).(A).(ii).

The location is not within a wildlife Restricted Surface Occupancy Area.

2) Please correct the interim reclamation commencement date to September 2015.

3) EOG agrees with the depth to groundwater change.

Thank you, and please contact me with any additional questions or if you need more information.

Kate,

Thanks for the quick response. However, I don't see how your answer to my first comment has to do with a required pipeline description that I asked for.

Doug,

Apologies. I was reading that as a different question. Please see below.

EOG typically installs a 3" buried welded steel line from the wellhead to the treater. From the treater to the tanks, EOG typically installs 1-3" welded steel oil line, and 1-3" buried welded water line. Additionally, EOG typically installs 1-3" gas line moving the gas off pad to sales.

Please let me know if you have any additional questions or need more information.

Thank you,

Kate Holsinger
