## COMMENTS:

COGCC Remediation # 4251

Attached to this Form 4 submittal is the 2014 second quarter sampling report. Results are summarized in the attached Table 1 and Figures 2 and 3. MW1 continues to slightly exceed the COGCC cleanup concentrations for benzene.

Eleven rounds of quarterly sampling have been completed since November of 2011. The benzene concentrations are slightly elevated, above the COGCC standards, in MW1 only. The remaining five wells are testing below the laboratory's detectable levels for BTEX. Based on these results, WPX respectfully asks permission to discontinue sampling of all monitoring wells except for the MW1. MW1 will continue to be sampled on a quarterly basis. Also, with COGCC's permission, WPX would like to remove the following constituents from the current analytical suite:

- PAHs
- Metals - calcium, potassium, selenium, and sodium
- General Chemistry - BOD, COD, bromide, chloride, hydroxide alkalinity, total plate count, total organic carbon, and pH (it's measured in the field)

WPX is currently reviewing several treatment options for the MW1 which will be proposed in a subsequent Form 4 for COGCC's prior approval.
