

Fiducial 6-62-34_35 NWSW Pad (LOC 436773)

Pipelines Info

This location will have 2 Gas Pipelines (2" steel), 2 Water Pipelines (3" steel), 2 Oil Pipelines (3" steel), 2 Injection Pipelines (4" steel), 2 flowlines (4" steel). When possible temporary water pipelines will carry water from storage tanks or water sources to well completion sites. Pipes will be made of flexible and rigid materials (plastic, aluminum and steel) generally 8" to 12" in diameter. The length will be determined by the distance to the well site to be serviced for the fracing operation. This will greatly minimize the number of truck trips required for the well completion.
