I provided verbal authorization yesterday to proceed with plugging back and sidetracking lateral 2. Attached is an excel spreadsheet that depicts my understanding of the historical progress and current situation of the well. Please review it and notify me of any mistakes that may be in my report. I would like to know what depth interval you cut a window in the 7" OD csg to commence lateral number 2.

Since you are completely plugging all of lateral 2 or all the way back to the 7" csg in the vertical pilot well, I have named your new borehole Lat 3 instead of sidetrack 1 in Lat 2 and give it the API ext of -03.

I have also attached the formal procedure for unplanned sidetracks.

Mark Weems, P. E.
