

# **NARRATIVE ATTACHMENT**

## **FORM 4 (SUNDRY NOTICE)**

### **Earthen Pit (Steel Tank) Closure (Cathedral Federal Unit #27-1)**

Document Date-8/6/2014

---

#### **Introduction**

Encana Oil & Gas (USA) Inc. (Encana) is submitting this Form 4 Sundry Notice to request final closure status for the earthen pit associated with the Cathedral Federal Unit #27-1 (COGCC facility #314987, COGCC remediation #8467). The site investigation was conducted by a third party contractor as authorized by Encana personnel and in accordance with the approved Form 27 previously submitted for this location. All samples were collected in accordance with Encana's Environmental Compliance Group's Sampling Procedures. The analytical results for the respective soil samples are provided in Table 1 and Attachment A of this submittal. The text below provides the details of the site investigation. For a visual description of the site please refer to Figures 1, 2, and 3 – Site Maps.

#### **Assessment Activities**

June 10, 2014 - The excavated soil surrounding the earthen pit was screened utilizing a photoionization detector (PID) prior to collecting soil samples for laboratory analysis. The steel tank was carefully removed using a trackhoe and placed onsite for later recycling or disposal. It should be noted that the steel tank was pumped out prior to removal. grab sample was collected directly from the lowest point of the pit after excavation. In addition, four (4) grab samples were collected, one from each excavated sidewall. Approximately 47 cubic yards of excavated material was removed from the pit and laid out in 2 foot tall (45' x 12') lift for evaluation of impacts. The excavated material was sampled by way of a nine (9) point composite sample. Four (4) background samples were collected from approximately six (6) inches beneath the grounds surface for analysis with regards to arsenic.

#### **Analytical Review**

Sample results indicate that soil within the earthen pit (w/steel tank) footprint on Encana's Cathedral Federal Unit #27-1 well pad, had organic constituent concentrations of the excavated area below or within COGCC Table 910-1 except for benzene collected from the base of the pit. Analytical results indicated the excavated material exceeded COGCC Table 910-1 allowable concentrations for arsenic (4.9 ppm) and Total Petroleum Hydrocarbons (TPH) (880 ppm). Though the arsenic concentration in the soil is above the allowable concentration identified in Table 910-1, the concentration is close to the range of arsenic background values (Non Detect – 2.0 ppm) in this area. Based on these results and footnote 1 to COGCC Table 910-1, Encana requests that the COGCC consider the higher range of background arsenic value(s) as the allowable concentration for this constituent. Please see Table 1 and Attachment A for the analytical results.

Though the elevated arsenic level of the returned spoil material within the excavated footprint area is above the allowable levels identified in Table 910-1; it will be buried greater than three feet bgs of existing pad footprint material to assure that material with elevated level of arsenic will have no adverse effect on future re-vegetation efforts and receptors in the area. Please see Table 1 and Attachment A for analytical results.

---

# **NARRATIVE ATTACHMENT**

## **FORM 4 (SUNDRY NOTICE)**

### **Earthen Pit (Steel Tank) Closure (Cathedral Federal Unit #27-1)**

Document Date-8/6/2014

---

The excavated material that exceeded COGCC Table 910-1 allowable concentration for TPH was landfarmed and amended with water, fertilizer, and turned. The excavated material was re-sampled July 23, 2014 and the results are below or within allowable COGCC Table 910-1 concentrations. The sample collected from the base of the excavated pit that exceeded the allowable limit for benzene was also resampled at this time and the result was within allowable COGCC Table 910-1 concentrations.

#### **Conclusion**

Based on the site investigation and analytical results, the earthen pit associated with the Cathedral Federal Unit #27-1 is in compliance with the standards specified within COGCC Table 910-1. Encana respectfully requests that final closure be granted for the respective pit, COGCC remediation #8467.

#### **Notification of Completion**

This Sundry Notice is also being submitted as the Notification of Completion for Remediation #8467. If the information provided here is satisfactory, please provide documentation of the closure of this remediation project.

**List of Analytes with QC Qualifiers**

Sample Number	Work Group	Sample Type	Analyte	Run ID	Qualifier
L704024-06	WG726363	SAMP	Nitrobenzene-d5	R2941665	J1

Attachment B  
Explanation of QC Qualifier Codes

Qualifier	Meaning
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.

Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

TIC - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.
