

## Project Memorandum

<b>To:</b>	Mr. John Noto	<b>Company:</b>	Colorado Oil and Gas Conservation Commission
<b>From:</b>	Cory Chance	<b>Company:</b>	URS Corporation
<b>CC:</b>	David White, Scott Pope, Bob Williamson, Kevin Lively	<b>Company:</b>	Colorado Interstate Gas
<b>Date:</b>	August 14, 2014		
<b>Subject:</b>	Fort Morgan Second Quarter 2014 Groundwater Monitoring Event - Remediation Site #3792		

This memorandum summarizes the groundwater monitoring field activities and analytical results for the Second Quarter 2014 monitoring event which extends the long-term monitoring (LTM) program at the Colorado Interstate Gas (CIG) Fort Morgan Compressor Station (Site). The LTM consists of quarterly groundwater monitoring to monitor the extent of dissolved methane concentrations in groundwater resulting from an accidental release of natural gas in October 2006.

This memorandum includes a brief summary of the field activities, and includes the following attachments:

- Table 1 – Summary of Field Parameters and Dissolved Gas Results – June 2014
- Table 2 – Summary of Dissolved Methane Results for LTM Locations
- Table 3 – Summary of Deep Monitoring Well Field Parameters and Dissolved Gas Results
- Figure 1 – Groundwater Monitoring Sample Locations
- Figure 2 – Shallow Groundwater Potentiometric Surface June 2014
- Figure 3 – Dissolved Methane in Shallow Groundwater June 2014
- Figure 4 – Dissolved Methane Time Series Graphs

### Summary of Field Activities

The Second Quarter 2014 monitoring event was conducted from June 16 to June 18, 2014. The monitoring network (Figure 1) includes 21 piezometers, 2 active domestic wells (H101 and H98), 3 inactive domestic wells (H100, H64/65, and H66), 4 monitoring wells (MW-01, CPT-46SR, CPT-58SR, CPT-62SR), and 2 deep monitoring wells (DMW-1 and DMW-2). URS collected domestic well samples on June 16, 2014, deep well samples on June 16 and 18, 2014, and piezometer and monitoring well samples on June 17 and 18, 2014.

Prior to sample collection at the piezometers and the monitoring wells, URS measured the natural gas content in the headspace of the riser pipe using a QRAE Multi-Gas Monitor (QRAE). Once the headspace screening was completed, URS measured the static groundwater level and total well depth at each monitoring location, using an electronic water level indicator.

While attempting to remove the cap from site CPT-57R, the PVC piezometer came apart at a joint approximately 12 inches below the top of completion. The sand fill in the protective casing fell into the piezometer, filling it to approximately 18 feet below completion. The historic water level at this site is approximately 20 feet below completion. The sample team

Project Memorandum

August 14, 2014

Page 2 of 2

attempted to blow out the sand using the available equipment on site, but was unsuccessful. The sample team was not able to collect a sample from this location for this event. The piezometer at this location will need to be repaired or replaced before a sample can be collected for future events.

Based on the February 13, 2014 approval by the Colorado Oil and Gas Commission (COGCC), piezometers CPT-09S, CPT-17S, CPT-26S, CPT-44S, and CPT-50S are sampled annually during the First Quarter Monitoring Event and were not sampled during this sample event.

The size of the Second Quarter 2014 dissolved methane plume is similar to the dissolved methane plumes observed during the First Quarter 2014 monitoring event. The Second Quarter 2014 event was the second consecutive event that dissolved methane was not detected above the COGCC 2.0 milligrams per liter (mg/L) action level in the Southwest portion of the project area, which includes piezometers CPT-09S, CPT-11S, and CPT-15S (Figure 3). Dissolved methane concentrations adjacent to and east of the Site continue to exceed the 2 mg/L action level in the groundwater (Figure 3).

#### **Future Work**

The next groundwater monitoring event is scheduled for September 2014.

If you have any questions or comments regarding this memorandum, please feel free to contact me at 719.268.7417.

Sincerely,  
URS Corporation

Notes:  
 \* - Historical data are minimum and maximum of pre-LTM events sampled between March and November 2007  
 Less than (<) symbol indicates result was not detected at the associated detection limit.  
 Units are milligrams per liter (mg/L)  
 COGCC = Colorado Oil and Gas Conservation Commission  
 LTM = long-term monitoring  
 NS = Not sampled

<b>Bold value</b>	Highest detected value at each sample location
<i>Italic value</i>	Lowest detected value at each sample location
Value	> 2.0 mg/l (COGCC Dissolved Methane Action Level)
Value	> 0.0067 mg/L and <= 2.0 mg/l
Value	<= 0.0067 mg/L (Background dissolved methane concentration determined during Phase I Investigation)

*Notes:*

The February 20, 2011 groundwater samples at DMW-1 and DMW-2 were collected using a bailer; all subsequent groundwater samples at these wells were collected using passive diffusion bags, which were deployed at a depth of approximately 350 feet below ground surface.

Less than (<) symbol indicates the concentration listed is below the reporting limit for the specific sample, analytical method, and analyte.

"J" flag indicates an estimated value.

H<sub>2</sub>S = hydrogen sulfide

ORP = oxidation-reduction potential

NA = Not Applicable

Value > 2.0 mg/L (COGCC Dissolved Methane Action Level)

Value > 0.0067 mg/L and <= 2.0 mg/L

Value <= 0.0067 mg/L (Background dissolved methane concentration determined during Phase I Investigation)

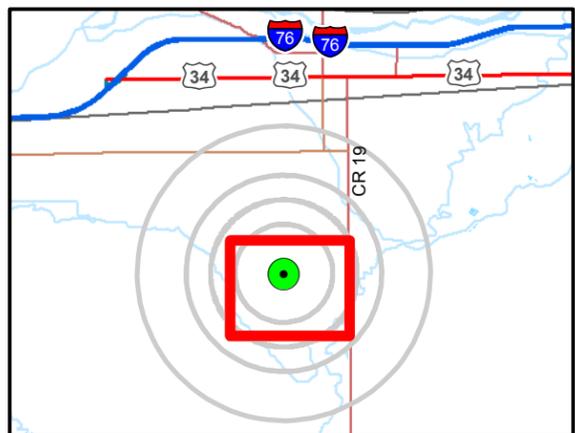

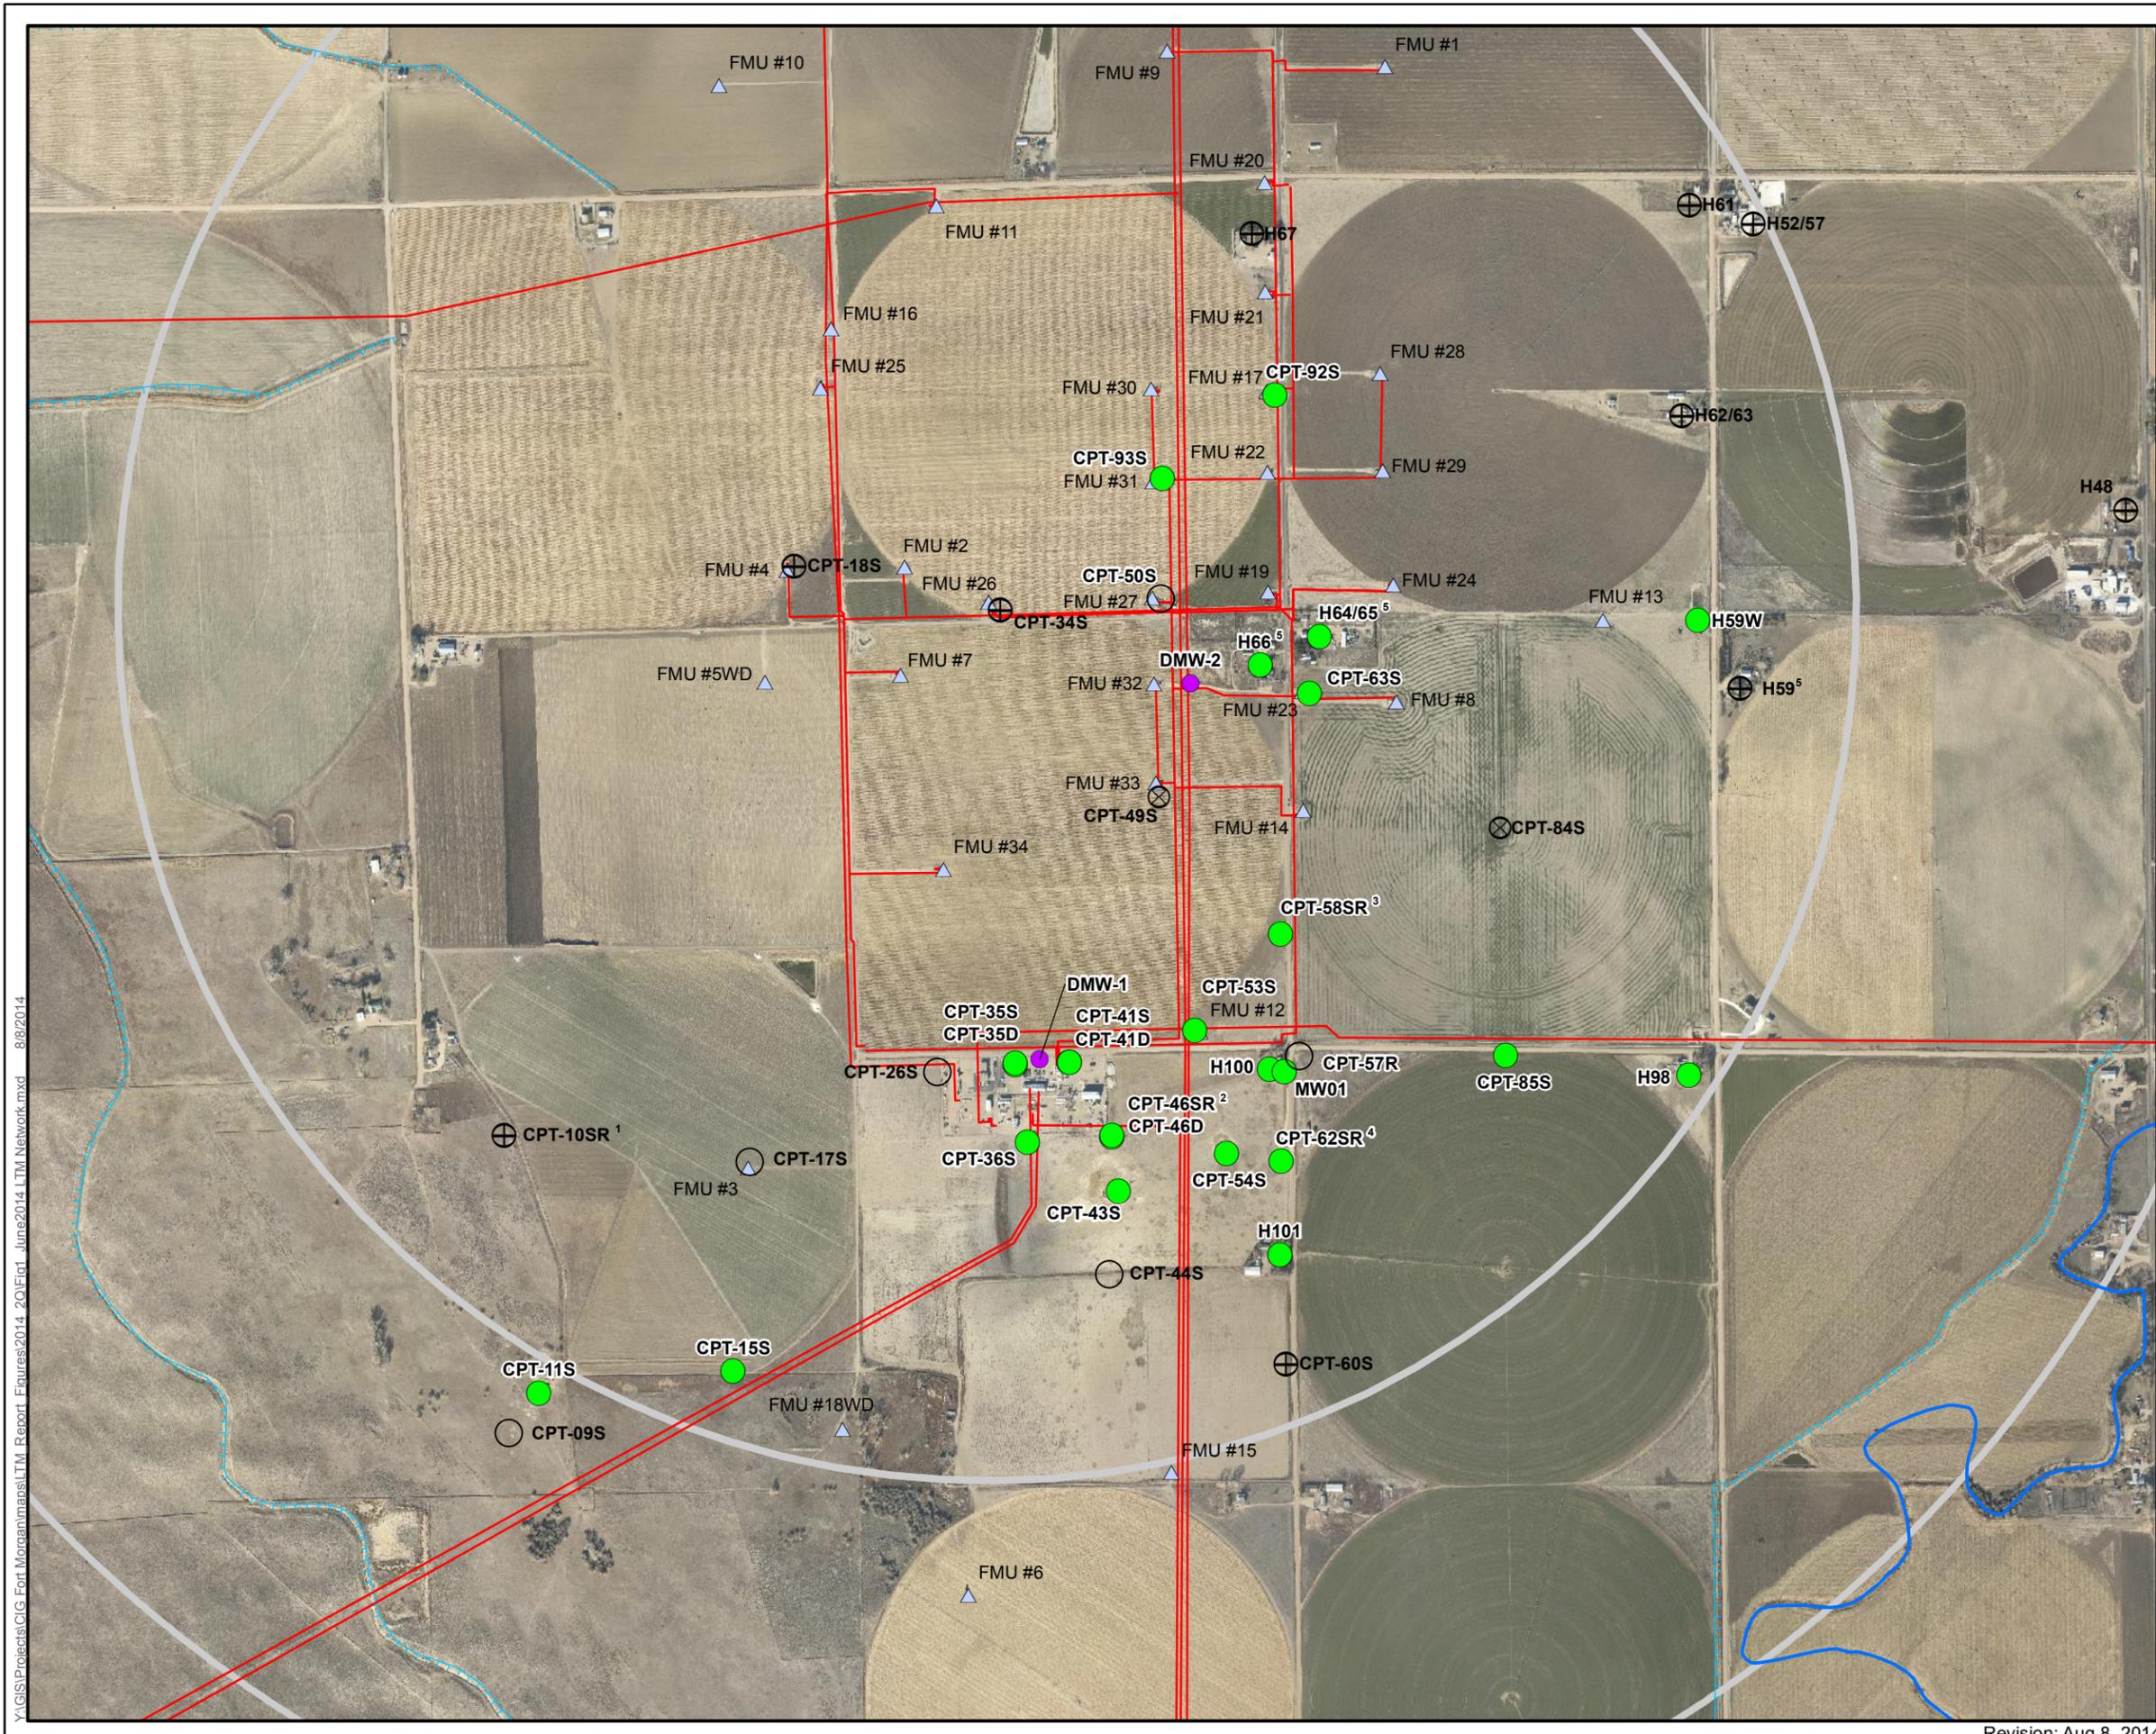

ppm = parts per million

LEL = lower explosive limit

uS/cm = microSiemens per centimeter

mg/L = milligrams per liter

mV = millivolt
