Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On August 25, 2014, a historical release was discovered during tank battery decommissioning activities at the UPRC 15-6K, 15-3K site. There were no indications that the dump lines, water tank, or fittings were leaking, and the volume of the release is unknown. The tanks and associated lines were cleaned in preparation for decommissioning. A groundwater sample was collected and analyzed for benzene, toluene, ethylbenzene, and xylenes (BTEX). Laboratory analytical results, received on August 26, 2014, indicated benzene concentrations above the COGCC Table 910-1 standards, making this release reportable. Groundwater analytical results are presented on the attached table and laboratory analytical report.
